Hon. Josiah Quincy, Mayor of the City of Boston:

SIR: In compliance with the Revised Ordinances, the annual report of the operations and expenses of the Street Department for the year 1895 is herewith respectfully submitted.

ORGANIZATION.

The work of the department during the past year has been carried on under the same organization that was effected when the consolidated department was created in 1891, with the exception that, as recommended in the last report of the department, a Street-Watering Division has been established, and the work of street watering, formerly carried on by the Paving Division, with a foreman in charge, now devolves upon the Deputy Superintendent of this division.

By the provisions of Chapter 449 of the Acts of 1895, the Ferry Department, on July 1, 1895, became a part of the Street Department, and was on that date organized as the Ferry Division.

The several divisions of the department are as follows:

The Central Office. Bridge Division. Boston and Cambridge Bridges. Ferry Division. Paving Division. Sanitary Division. Sewer Division. Street-Cleaning Division. Street-Watering Division.

Each of the above divisions, with the exception of the Central Office Division and the Boston and Cambridge Bridges, is in charge of a Deputy Superintendent. The Boston and Cambridge Bridges are managed by two commissioners, the Superintendent of Streets being the commissioner for the city of Boston, the other commissioner being appointed by the Mayor of the city of Cambridge.

Much confusion has in past years resulted from the fact that the district lines were differently drawn in the several divisions, while the work of one division in a district often required the coöperation of another; the openings made by a foreman of the Sewer Division, in a district, require the attention of the paving foreman, and in the central portion of the city, the district foreman of paving assists the district foreman of the street cleaning in times of storm. Formerly the district of one division overlapped and included portions of several districts of another division.

The organization has been much improved, the work simplified, and coöperation made more easy by the rearrangement of the city into new Street Department districts which are the same for all divisions, the order for which was issued as follows:

CITY OF BOSTON-STREET DEPARTMENT.

DESCRIPTION OF DISTRICTS, 1895.

The city of Boston is hereby divided into Street Department districts, ten in number, described and bounded as follows:

DISTRICT No. 1. South Boston. — Bounded southerly upon District No. 6, Dorchester; namely, from a point on the N. Y. & N. E. R.R., north of Massachusetts avenue, in the line of the extension of Willow court; thence by and including Willow court and Mt. Vernon street, to the N. Y., N. H., & H. R.R.; thence by the line of Carson street extended to the harbor.

DISTRICT NO. 2. East Boston and Breed's Island.

DISTRICT NO. 3. Charlestown.

DISTRICT NO. 4. Brighton. — Bounded easterly upon District No. 9, Back Bay; namely, from the Charles river by and including St. Mary's street.

DISTRICT NO. 5. West Roxbury. — Bounded northerly upon District No. 7, Roxbury; namely, from Brookline line by and including Chestnut street to Perkins, Perkins street to Centre, Centre street to Paul Gore, Paul Gore street to Lamartine, Lamartine street to Boylston, Boylston street to Washington, Washington street to Seaver, Seaver street to Blue Hill avenue; bounded easterly upon District No. 6, Dorchester; namely, by and not including Blue Hill avenue to Back street, by and including Back street to Hyde Park line.

DISTRICT No. 6. Dorchester. — Bounded westerly upon Districts Nos. 5 and 7, West Roxbury and Roxbury; namely, from Hyde Park line by and not including Back street to Blue Hill avenue, by and ineluding Blue Hill avenue to Brookford street, Brookford street to Magnolia, Magnolia street to Robin Hood, Robin Hood street to Magnolia, Magnolia street to Dudley, by and not including Dudley street to N. Y. & N. E. R.R., N. Y. & N. E. R.R. to South Bay, North of Massachusetts avenue; thence bounded northerly by District No. 1, South Boston; namely, by and including Willow court and Mt. Vernon street to the N. Y., N. H., & H. R.R.; thence by the line of Carson street extended to the harbor.

DISTRICT No. 7. Roxbury. — Bounded southerly upon District No. 5, West Roxbury; namely, from the Brookline line by and not including Chestnut street to Perkins, Perkins street to Centre, Centre street to Paul Gore, Paul Gore street to Lamartine, Lamartine street to Boylston, Boylston street to Washington, Washington street to Seaver, Seaver street to Blue Hill avenue; bounded easterly by District No. 6, Dorchester; namely, by and not including Blue Hill avenue to Brookford street, Brookford street to Hartford, Hartford street to Boyle, by and including Dudley street to N. Y. & N. E. R.R., N. Y. & N. E. R.R. to Norfolk avenue; bounded northerly by District No. 8, South End; namely, by and not including Norfolk avenue to Hampden street, Hampden street to Lenox, Lenox street to Tremont, Tremont street to Camden, Camden street to N. Y., N. H., & H. R.R.; bounded northerly and westerly by District No. 9, Back Bay; namely, from N. Y., N. H., & H. R.R. by and not including Gainsborough street to Huntington avenue, Huntington avenue to Tremont street, Tremont street to the Brookline line.

DISTRICT NO. 8. South End. — Bounded southerly by District No. 7, Roxbury; namely, from N. Y. & N. E. R.R. by and including Norfolk avenue to Hampden street, Hampden street to line of East Lenox produced. East Lenox street to Lenox, Lenox street to Tremont, Tremont street to Camden, Camden street to N. Y., N. H., & H. R.R.; bounded westerly by District No. 9, Back Bay; namely, by N. Y., N. H., & H. R.R. to Church street, by and including Church street to Boylston; bounded northerly by District No. 10, West End and North End; namely, by and including Boylston street to Tremont, Tremont street to Court, Court street to State, State street to Kilby, Kilby street to Oliver, Oliver street to Fort Point Channel.

DISTRICT No. 9. Back Bay.— Bounded southerly upon District No. 7, Roxbury; namely, from the Brookline line by and including Tremont street to Huntington avenue, Huntington avenue to Gainsborough street, Gainsborough street to N. Y., N. H., & H. R.R.; bounded easterly by District No. 8, South End; namely, by the N. Y., N. H., & H. R.R. to Church street, by and not including Church street to Boylston; bounded northerly by District No. 10, West End and North End; namely, by and including Boylston street to Arlington, Arlington street to Beacon, Beacon street to Otter, Otter street to Charles River; bounded westerly by District No. 4, Brighton; namely, from Charles river by and not including St Mary's street to the Brookline line.

DISTRICT No. 10. West End and North End. — Bounded southerly by Districts Nos. 9 and 8, Back Bay and South End; namely, from Charles river by and not including Otter street to Beacon, Beacon street to Arlington, Arlington street to Boylston, Boylston street to Tremont, Tremont street to Court, Court street to State, State street to Kilby, Kilby street to Oliver, Oliver street to Fort Point Channel.

(Signed)

B. T. WHEELER, Superintendent of Streets.

The result anticipated has been fully realized, and especially has this been demonstrated in the Street-Cleaning Division, whose district lines most sadly needed alteration, having been practically unchanged since their first establishment by Superintendent Forristall, of the old Health Department. Economy of operation and increased efficiency resulted from the change, and the consequent reorganization, as is shown in the report of the Deputy Superintendent (Appendix F); the average cost of cleaning streets per mile, exclusive of supervision, last year, under old system, was \$12.57; this year, under new organization, \$11.80; the average cost, inclusive of supervision, yard and stable expenses, etc., last year, \$15.61; this year, after reorganization, \$14.40, showing saving of \$0.77 per mile in actual work of cleaning, and an additional saving of \$0.44 per mile in supervision.

Increased efficiency of the administrative force of the Sewer Division has been obtained by the removal of the offices to the Probate Building, Court square. Previous to this the Deputy Superintendent, clerks, and permit office of the Sewer Division were in City Hall, Room 44, the chief engineer, district engineers, and draughtsmen in six small dimly lighted rooms in a wooden addition in the rear of No. 14 Beacon street; here all the working and many record plans were necessarily kept, and much time consumed in travel over nearly one-quarter of a mile intervening between these offices and City Hall, plans for immediate reference being required by the Superintendent many times daily. Had fire swept these offices, the loss to the city would have The office of the Street-Watering been immeasurable. Division and of the Permit Office of the Paving Division were in the Old Court-House, and this separation of the two permit offices of the department in different buildings made needless confusion and annovance for the public. By the occupancy of the Probate Building, a fire-proof structure of four stories, which was entirely renovated, the entire Sewer Division offices were consolidated upon the three upper floors, much-needed room and light acquired for draughting, and proper fire-proof storage given for plans. Upon the lower floor were located the permit office of the

4

Paving Division and the Street-Watering Division, and this building being entirely occupied by offices of the Street Department, was connected with the general office of the Superintendent of Streets in City Hall by an iron covered bridge, bringing them, to all intents and purposes, under the roof of City Hall and within the personal reach of the Superintendent. Events have proved that had it not been for this consolidation of forces and increased working space, it would have been impossible to have carried on the engineering and administration of the vast amount of sewer construction undertaken this year.

PURCHASING.

Early in the year a change was inaugurated in the methods and forms of purchasing supplies for the departments, the office of Purchasing Agent was abolished and the Superintendent became personally responsible, as he should be, in all matters of expense charged to the appropriation of this department; these methods resulted in reducing the amounts purchased by deputies, foremen, and others to a minimum. New forms of duplicate bills were introduced; before a bill is now passed for payment the signature has been obtained of the foreman who received the goods, of the chief clerk of the division ordering, of the Deputy Superintendent, the purchasing clerk, and the Superintendent of Streets.

Responsibility for the order, receipt, quality, and price is therefore fully fixed. The results obtained are made apparent by a comparison of the percentages of the total annual expenditure paid for bills and for labor last year and this, showing a saving of some $6\frac{1}{2}$ per cent. in bills, which consequently gave opportunity for an increased percentage of expenditure in labor upon the streets : a part of this saving has been so expended and the balance of the appropriation, \$24,822.37, has been returned to the city treasury.

YARDS AND STABLES.

In South Boston, the stables, yards, and offices of the Paving, Street-Cleaning, and Sanitary divisions are upon leased property, the Sewer Division yard and Paving wharf are upon city property included in the limits of the Strandway, which must soon be vacated, and the Bridge Division is obliged to rent a stable and has no fit accommodations for office and storehouse. A piece of land with wharf privileges should be purchased and buildings for the use of these four divisions erected upon it.

In East Boston, the quarters of the Paving and Sewer

divisions on city land are inadequate and unsatisfactory and the buildings must soon be rebuilt; the city owns no wharf privilege, although in the district all supplies of paving and crushed stone must reach it by water; there is no yard for the Sanitary and Street-Cleaning divisions; the collection of ashes and offal therefore must be done by contract, and the Charlestown street-cleaning force journeys to East Boston in order to give it an aspect of cleanliness twice a week. These conditions should be changed and a location provided on the water-front for these four divisions, with suitable buildings for each.

The Back Bay district has in its yard no stable accommodations except for the driving-horse of the foreman, and consequently all teams here employed are hired; sufficient room should be provided to give stabling to the minimum number of horses required.

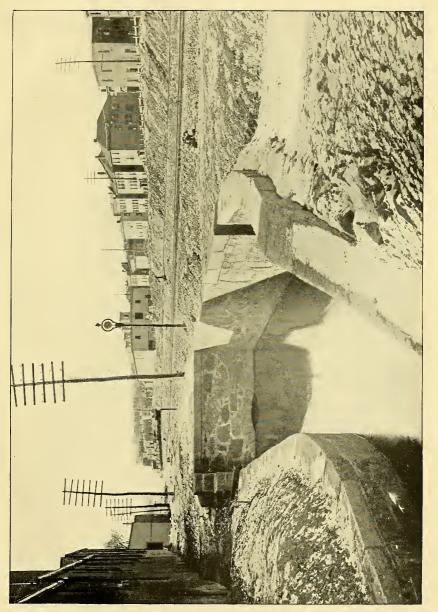

Attention is also called to the entirely inadequate quarters at the Main and Intercepting Sewer yard on Massachusetts avenue, near Albany street. Negotiations were opened during the year for the purchase of the buildings of the New England Construction Company, on the city land at Gibson street, Dorchester, for this purpose, but were not satisfactorily terminated.

The city should and could economically maintain a sufficient force of horses to do its entire work at the periods of ordinary demand, and the hiring of teams should be eliminated as far as possible, and a certain and considerable saving would then accrue to the city.

But the accommodations are at present insufficient, and no money is available for additions either to stable or stock; the maintenance appropriation, which is the only one available, being severely taxed to replace with sufficient rapidity the horses who outlive their usefulness or become injured in the city's employ. Additional stables and stock of 75 horses in the different divisions are required, and would result in an annual saving of about \$150 per single team (horse and man), besides giving employment to an equal number of citizens. A better service would be obtained than of the under-paid alien in charge of the hired horse of none too active character.

STONY BROOK.

The question of the relation of Stony brook to the extension of Columbus avenue and the raising of the tracks of the Providence Division of the N. Y., N. H., & H. R.R. Co. was quite fully discussed in last year's report; and as the result of the studies made at that time it was decided, for

STONY BROOK, -- NORTHERLY END OF LOW-GRADE COVERED CHANNEL, SHOWING NECESSITY OF THE CONTINUATION OF THE IMPROVEMENT.

the reasons therein set forth, to locate the channel proposed by the Stony Brook Commission of 1886 within the lines of the avenue, and to build it between the existing portion of the same channel which now ends at the Inlet Chamber and the section of improved channel built during the year by the N. Y., N. H., & H. R.R. Co. from near Ritchie street to 400 feet south of Boylston street, as a part of the construction of the avenue, and it has been so ordered by the Street Commissioners in their order of construction of the avenue.

The necessity for extending the Commissioner's channel down to meet that now ending at the Inlet Chamber is clearly shown by the photograph inserted in this report, showing the arch of the channel nearly submerged, and the channel entirely inaccessible for cleaning out or the removal of obstructions, accumulations of lumber, rubbish, etc.

The scheme discussed for building a low level sewer, in connection with this channel, for those portions of West Roxbury which cannot be sewered by extensions of the existing system of sewers has also been adopted, and a portion of it 2,092.5 feet long has been built on the haunch of the arch of the channel built last season by the N.Y., N.H., & H. R.R. Co., and the bill for the same has been paid by the city. Another portion of the low level sewer has been built in Tremont street, between the Roxbury Crossing and Texas street, the sewer being built inside of the existing 7 feet \times 7 feet channel of Stony brook, and paid for by the abutter, as a part of the cost of diverting the brook around his premises. Plans are in progress for the construction of those sections of Columbus avenue between the Roxbury Crossing and Ritchie street, in which the Stony-brook channel and the West Roxbury low level sewer form a part of the system.

This channel, carrying the sewer, should be built in advance of any other work of construction on this part of the avenue, because it requires the deepest excavation; its construction should certainly precede the laying of any large water-mains.

As a portion of, or possibly the entire present course of, the brook between the Inlet Chamber and the land of the Highland Foundry Company will probably have to be followed in building the new channel, and as this location is parallel and adjoining that of the Providence Division, this portion of the channel should be built before the railroad company begins to build its retaining-wall for raising its tracks, which will be begun by midsummer.

The discussion in last year's report upon the route to be followed in building the new channel from the corner of Pynchon street (or Columbus avenue) and Centre street to Amory

street, and thence to connect with the northerly end of the new channel just built by the N.Y., N. H., & H. R.R. Co., proceeded upon the assumption that the present location of the brook would be followed, and the cost of building the connecting link between the last-mentioned portion of the new channel and the portion to be built in Columbus avenue, ending near Ritchie street, was included in the estimate of cost, but this portion was not included in the order of construction by the Board of Street Commissioners. But now, on account of the removal of buildings and additional takings made by the railroad company at the corner of Centre and Amory streets, a shorter route may be found by following Centre street from its present intersection with Pynchon street to the easterly side of the railroad location, thence along the easterly side of this location to the northerly endof the channel, as already built by the railroad company. This route is about 250 feet shorter than the present route of the brook, which would represent a saving of about \$20,000, based upon the figures of the Commission of 1886, and would probably result in a larger saving, as a large amount of ledge, and also the handling of the water of the brook during construction, would be avoided; this last consideration is one which would be highly appreciated by con-This portion of the channel should not be built tractors. until the grade of Centre street has been lowered by the railroad company in order to carry it under their proposed bridge, but should be done immediately after and before Centre street is resurfaced.

An additional reason for promptness is that the old channel between Centre and Ritchie streets cannot be filled in (and Columbus avenue cannot therefore be finished) until the new channel is completed.

The question as presented in last year's discussion is still an open one as to the adoption of means by which water shall be furnished to the Boston Belting Company, if a settlement of their claim to the water of the brook is not made. Such a settlement seemed probable in the latter part of the year, the Mayor being authorized by the City Council to make such arrangements as it was hoped would relieve the city of one complication of the Stony-brook problem, which has vexed it for so many years; but no agreement seems to have been reached.

The building of an auxiliary channel from the farthest point up stream of the low-grade channel as improved, has, however, been abandoned, and the water of the brook must be furnished, if at all, either by the erecting of a movable dam or the setting up of a pumping plant at the present Inlet Chamber. The question of the treatment of Stony brook at one other point has arisen during the year; namely, at the Washingtonstreet crossing of the N. Y., N. H., & H. R.R. near Forest Hills Station, occasioned by the proposed construction of the bridge abutments at this point necessary for the raising of the tracks of this railroad.

Two alternatives presented themselves: either to construct a section of the improved low-grade channel at this point, forming another pocket and settling basin, which a continuation of the improvement would not reach for many years, or to abandon this location, since after the construction of the abutments no excavation for such a purpose could safely be made between them. It was found that the construction of the section would be very expensive and difficult even at this time, and it was therefore decided that a preferable expedient would be to construct the conduit when future needs required, by extending it upon the easterly side of the railroad upon a taking to be made for that purpose, either within or without the railroad location, to a point at which it might cross under the proposed embankment of the railroad to join the existing channel upon the other side. This arrangement not only obviated the necessity of present outlay, for no immediate advantage, but the new location will undoubtedly avoid a pocket of quicksand existing near the present crossing, and result in far more economical construction without material increase in the length.

The consent of the railroad by its chief engineer has been obtained to the crossing of its right of way with this channel, "provided the city will agree to bear all the expense, when the conduit is constructed, in protecting the company's tracks," etc. — a usual and satisfactory condition.

"THE BOULEVARDS."

The four avenues, Blue Hill, Columbus, Huntington, and Commonwealth extension, which have come to be popularly known as "The Boulevards," have required a large amount of engineering, draughting, and supervision, and that portion upon which construction has been ordered by the Street Commissioners has been divided for purposes of reference and contract into 38 sections; these include the whole of the proposed avenues except that portion of Blue Hill avenue, from Walk Hill street to Milton line, which crosses the N. Y. & N. E. R.R., and upon which construction will not be ordered until the grade-crossing problem is solved at this point.

Contracts, forty-two in number, have been let as required

by law, and work commenced either upon sewer construction or grading, in some cases both, upon every one of these 38 sections, except four on Columbus avenue lying between Roxbury Crossing and Centre-street bridge, for which distance the avenue is laid out over the existing Pynchon street.

Because of the fact that the operations of the N. Y., N. H., & H. R.R. in raising its tracks between these points might inconvenience public travel, it seemed unwise to disturb the paved surface of the street and thus increase the burden upon heavy traffie in this vicinity, while either end of the avenue required such extensive work and was so far from completion. It is in these four sections, moreover, that Stony brook must go, and much additional time was required for the completion of the plans and the working out of details. There seems to be now no good reason why operations should not commence in the early spring upon the important work of these sections, which includes the provision for Stony brook before referred to.

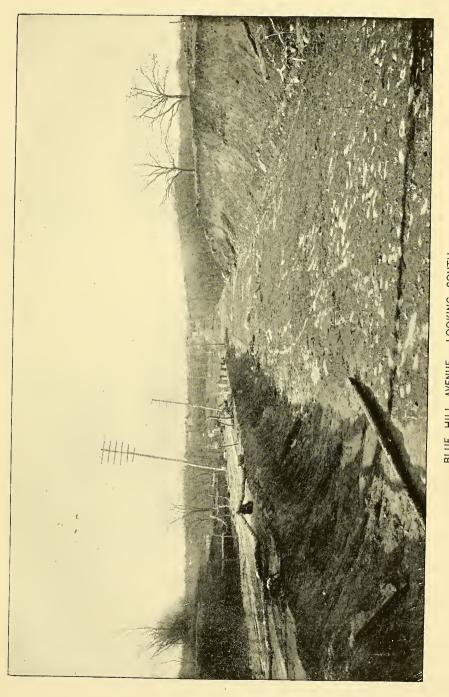

In connection with the construction of these avenues, the West End Street Railroad Company has agreed, because of the privilege of location, to loam the entire width of all the reserved spaces to a depth of eight inches, at its sole cost and expense.

Commonwealth Avenue.

Work upon that portion of Commonwealth avenue which many years ago was laid out under the general law, has been continued during the year. Early in the season the short portion of the southerly roadway between Beacon street and Cottage Farm at the bridge remaining uncompleted was graded, and the roadway opened to travel.

The widening of the bridge has been commenced. From the bridge to Brighton avenue the southerly roadway will be used as a speedway, and this is entirely subgraded, edgestones set, and gutters paved and partly gravelled with loose material for this purpose; a few days only of good weather will serve to complete it. The portion of the northerly roadway between the bridge and St. Paul street has been graded, eurbing set, and gutters paved and constructed of Telford macadam, completing this section of the work. Beyond the intersection of Brighton avenue the character

Beyond the intersection of Brighton avenue the character of the avenue changes, having no loamed reservation for street railway, but a wide central roadway instead, with winding side-roads on either hand. The westerly roadway has been graded, and a Telford road, with paved barrel-gutters, has been constructed to Warren street; a portion of it requires binding and rolling only. The easterly roadway

BLUE HILL AVENUE, – LOOKING SOUTH. (Blue Hill scarcely discernible in the middle distance.)

•

·

. .

has been subgraded to Warren street, and constructed from Brighton avenue to Harvard avenue, with Telford macadam and paved barrel-gutters.

A balance of \$87,227.88 remains unexpended of an appropriation of \$170,000, which it was estimated would complete the avenue to Warren street, and which appears to be more than amply sufficient. The surplus may be used to continue the work beyond Warren street.

The principal features of the work of the year may be summarized as follows:

Paving with granite blocks, and regulating 35 streets, or parts of streets, in various districts.

Construction of Telford macadam roadways on Commonwealth avenue, from Cottage-Farm bridge to Warren street; on Talbot avenue, from Wells avenue to Washington street, and on Harvard avenue, Norway street, Parker street, and St. Germain street.

Construction of sewers and grading upon Blue Hill, Columbus, Commonwealth extension, Huntington, and Brighton avenues.

Constructing three other macadam streets, under Chapter 323 of the Acts of 1891, and commencing eight others.

Setting 51,669 linear feet of new edgestone, and laying 20,632 square yards of new brick sidewalks, and 12,295 square yards of new granolithic sidewalks, besides resetting and regulating 113,806 linear feet of edgestone, and relaying 72,360 square yards of brick sidewalk.

Increasing our asphalt pavements by 17,933 square yards.

The completion of Chelsea-street bridge; the rebuilding of Chelsea, north, with new steel retractile draw; the extension of the pier and widening of Cottage-Farm bridge, and the construction of Gold-street bridge.

Building over 33 miles of sewers and 570 catch-basins and drop inlets, repairing 561 and cleaning 6,509 catch-basins, removing therefrom about 18,264 cubic yards of filthy material.

Cleaning about 11,419 miles of streets, removing 122,544 loads of dirt.

Sprinkling 338.13 miles of streets during the season.

Collecting and removing 336,886 loads of house-dirt and ashes.

Collecting and removing 51,327 loads of house-offal.

During the year, work has been completed upon streets, five in number, previously laid out and commenced under Chapter 323 of 1891, etc., and work has been commenced and prosecuted upon eleven others, upon which construction has been ordered; one only, Audubon road, has not been begun, as the date of the order (Nov. 7, 1895) made it impracticable.

The work begun last year upon Boylston-street extension has also been prosecuted.

The report of the Executive Engineer, which follows, alludes to the work of the Central Office, and includes a statement of the general finances of the department, with appropriations and expenditure from loans for special work, together with a valuable table of prices that obtained upon a contract basis.

Attention is also called to the general work of the divisions, under the special division headings following.

In addition to this report, seven appendices are herewith submitted, in which will be found the reports of the several Deputy Superintendents, showing the expenditures of each division in detail. They are as follows:

Appendix A — Bridge Division.

- " B Ferry Division.
- " C Paving Division.
- " D Sanitary Division.
- \cdots E Sewer Division.
- " F Street-Cleaning Department.
- " G Street-Watering Division.
- " H—Former Superintendents and Document Numbers.

Respectfully submitted,

B. T. WHEELER,

Superintendent of Streets.

BOSTON, February 1, 1896.

MR. B. T. WHEELER, Superintendent of Streets:

DEAR SIR: I herewith respectfully submit the annual report of the operations and expenses of the Street Department, the same being a full statement thereof for the year 1895.

CENTRAL OFFICE DIVISION.

EXPENSES OF THE CENTRAL OFFICE.

For the current expenses of the Central Office the City Council appropriated the sum of twenty thousand dollars (\$20,000), which was expended as follows:

Salaries General		e exp	endit	ures		$\$15,620\ 2,695$	
Tot	al .					\$18,315	$\overline{79}$

leaving a balance of sixteen hundred fity-four dollars and twenty-one cents (\$1,654.21), which was transferred to the city treasury.

# STREET DEPARTMENT.

#### Employment of Labor.

During the year ending February 1, 1896, 122 applications were made upon the Civil Service Commission for 428 employees of various grades, and 671 names were submitted by them, of which number 442 were given employment in the several divisions; of the 442 persons employed, 36 were appointed provisionally (Civil Service, Rule 36), 5 were given non-competitive examinations, 2 promoted, and 93 were veterans.

During the year 131 persons were transferred to this department from other city departments; making a total of 573 persons employed during the year.

Notices of 319 discharges from the department rolls were sent to the Commission.

The department records show that there are 3,044 persons eligible for employment in the various divisions, and of that number 2,531 were upon the pay rolls on the week ending January 23, 1896.

On July 1, 1895, the list of Ferry Division employees (195) was added to the department register.

The following table shows the classification of all employees of the Street Department on the rolls January 23, 1896, as recorded by the Civil Service Clerk of the department :

### STREET DEPARTMENT.

The table of former superintendents and document numbers of the annual reports at the end (Appendix H) will be found of convenient reference for general use in connection with the history of department work in past years.

Respectfully submitted,

HENRY B. WOOD,

Executive Engineer.

### BRIDGE DIVISION.

The total number of bridges in Boston in the care of the Bridge Division, not including culverts, is one hundred and Thirty-four of these are wholly supported by railthirteen. road corporations. Four-Harvard, Canal, Prison-Point, and West Boston bridges — all connecting Cambridge, are in the care of two commissioners, one appointed by the City of Cambridge, the Superintendent of Streets being the Boston Commissioner, ex-officio. The remainder, seventy-five in number, are supported, wholly or in part, by the City of Boston, and are in the care of this division, including twenty-three tide-water bridges, with draws, alone requiring for their operation seventy draw-tenders, assistant drawtenders, and engineers. A complete and systematic record of the openings of the draw bridges, giving numbers and time of openings and other data, appears in Appendix A.

The following table shows the amounts expended from the maintenance appropriation of the Bridge Division for the past five (5) years :

1891 (	(13 m)	onths)			\$123,010 63
1892	•	•			128,954 37
1893					133,159 24
1894					130,137 21
1895					119,716 00

There has not been an accident or a break-down inconveniencing public travel during the year. Charles-river bridge was closed to public travel from June 19 to Aug. 1, while extensive repairs, under the direction of the City Engineer, were made, and Mystic-river bridge, over that river and the B. & M. R.R. tracks, which has been closed to public travel during all of the year previous to Jan. 1, '96, while in process of building, has been reopened to the public. Something has been done toward modifying the smoke and hotcinder nuisance, so very disagreeable to pedestrians, and often so disastrous to horses and vehicles on Broadway and the Dartmouth-street bridges, by the erection of a shield on either side of both these bridges, which has thus far given most satisfactory results. Broadway bridge, because of its very large span, has always been very dark at night until this year. In coöperation with the Lamp Department, a large electric light has been placed in the exact centre of the draw by a device which works perfectly, permitting the opening of the draw without disconnecting the electric current, lighting up not only the roadway, but the waterway as well, and proving a great convenience to navigation.

Attention is again called to the necessity of proper headquarters for the South District of this division, which is still located on Foundry street, in a small building which has to suffice as an office and storehouse, the stable and storehouse of the district having been entirely destroyed by the strengthening of Broadway Bridge nearly two years ago. A portion of a stable, situated some distance away, was leased as temporary quarters and has been occupied ever since. Proper accommodations are badly needed in order that supplies may be purchased in quantity and arrangement made to properly protect them and check their delivery, as well as for stable purposes.

Of the bridges of greater importance but two are now operated by hand-power - Malden and Mount Washingtonavenue — and one, Meridian-street, by horse-power; rather primitive methods for these advanced times, and it is expedient that these be added to the list of those now operated by electric motors, of which there are three — Chelsea North, Dover, and Federal street bridges. The others use steam, but experience indicates electricity to be the best from every standpoint. The cost of coal for engines is a very considerable item in the expense of the division, while the cost of electricity is very trifling; the cost of repairs on engines far exceeds that on motors. There is the further consideration of space and cleanliness, all favorable to the motor. After making some inquiries, and investigation with reference to Warren bridge, it appears that complete electric power could be installed there for about \$2,000. The boilers and engines could be sold, and a saving of about \$700 per annum made on coal, and something additional saved on repairs, indicating a mistaken economy in retaining the engines.

One bridge has been added to those in the care of the division — a temporary foot-bridge over the N. Y., N. H., & H. R.R. at Roxbury Crossing, erected during the year at a cost of \$981, charged to the maintenance account.

Constructive work in the Bridge Division, for which money is provided by loan, has been of unusual proportions during the past year. The rebuilding of Chelsea-street bridge, commenced last year, has been completed, and in addition to the work done by the B. & M. R.R., at Chelsea bridge, the draw over the North channel has been entirely rebuilt. Charles river-bridge draw pier has been remodelled and rebuilt. Gold-street bridge abutments and iron superstruction have been completed, and Cottage Farm bridge is in process of construction.

The amount of expenditures for permanent improvements from loans provided, has been as follows during the last five (5) years:

1891	(13 m	onths)			\$41,317 53
1892	•	•			14,068 80
1893					13,466 92
1894					18,795 39
1895					52,471 06

The following statement of the City Engineer contains the main features of the special work of construction assigned to him by this department for engineering supervision :

> CITY OF BOSTON, ENGINEERING DEPARTMENT, 50 CITY HALL, January 31, 1896.

MR. B. T. WHEELER, Superintendent of Streets:

SIR: I herewith submit the following report of the work done under my direction for the Bridge Division of the Street Department during the year 1895.

The following are the principal items of work done :

Charles-river Bridge. — A contract was made June 14, 1895, with J. N. Hayes & Co., for repairing the draw and draw foundation. The cost of the entire work was \$4,259.51.

Chelsea Bridge North. — May 23, 1895, a contract was made with Augustus Bellevue & Co. to rebuild the draw foundation, about fifty-four feet of bridge, and the wharf, and to lengthen the up-stream pier fifty feet, and the downstream pier sixty feet; under another contract the same firm rebuilt the wood-work of the bridge above the piles for a length of fifty-three feet. The draw has been replaced by a new steel draw of the retractile style, built by the Penn Bridge Company of Beaver Falls, Penn.; it is operated by electricity, the motor being furnished by the General Electric Company; the draw has been in use since December 28, 1895. The total cost of the work charged to this appopriation to February 1, 1896, was \$33,827.91.

Chelsea-street Bridge. — As mentioned in the last annual report, the pile structure was rebuilt by B. F. Nay & Co., and the steel draw was built by the Boston Bridge Works. The bridge was opened to team-travel February 26, 1895. The cost of the contract-work on the pile bridge was \$15,241.53; on the steel draw, \$8,450. The sheathing of the bridge and draw was done by the Bridge Division.

Cottage Farm Bridge (over the Boston & Albany Railroad). — During the past year the following work has been done on the northerly section of the bridge: The middle pier has been extended 210 feet 6 inches, and the parapets on the abutments set by David S. Crockett & Co., the stone for the parapets being furnished by the Cape Ann Granite Company; two steel girders have been built and set in position by the Boston Bridge Works; 20-inch steel beams have been furnished by Page, Newell, & Co., but are not yet in place; and hollow brieks and skewbacks have been furnished by the Boston Fire Proof Company.

Gold-street Bridge. — Under an order from the Street Department, dated May 13, 1895, plans and specifications were prepared for a bridge over the tracks of the New York & New England Railroad at Gold street.

A contract for the abutments was made with Frank H. Blaisdell, dated June 11, 1895, for the sum of \$1,850, and subsequently an agreement was made with him for building two short return-walls at the ends of the west abutment. Work was begun July 1 and completed about January 1. The total amount paid under these two agreements was \$2,333.45.

A contract was made with the Boston Bridge Works, dated June 11, 1895, for the superstructure of the bridge, for the sum of \$1,570, and the work was completed January 20, 1896.

This department was also requested to see that the work of raising the building on the northerly side of Gold street, adjoining the east abutment, was carried out in accordance with an agreement made by the Street Department with F. H. Blaisdell, dated September 18, 1895. This work was finished early in January, satisfactory to the Building Department, and a final estimate made January 24, 1896, for the sum of \$2,082.37.

West Newton-street Bulkhead. — A timber bulkhead was built across the end of West Newton street abutting on the line of the Boston & Albany Railroad, under a contract with A. Bellevue & Co., for the sum of \$344.

Temporary Foot-bridge at Roxbury Crossing. — A wooden foot-bridge was built over the tracks of the New York, New Haven, & Hartford Railroad at Roxbury Crossing, on Tremont street, under a contract with Josiah Shaw, dated June 11, 1895, at a cost of \$981.

Yours respectfully,

[Signed]

City Engineer.

WILLIAM JACKSON,

Details of expenditures, income, and operations will be found in Appendix A.

# Comparative Table showing net cost of the maintenance of the Bridge Division to the City of Boston.

	Expenditur	es.	Income	э.	Net Cost.

### BOSTON AND CAMBRIDGE BRIDGES.

#### CANAL OR CRAIGIE'S BRIDGE.

The sidewalk on the south side of the Cambridge end should have been rebuilt this year; but not having sufficient appropriation to do the work in a thorough manner, it has been temporarily repaired. It will be necessary to rebuild it next year.

The piles on the Cambridge end have been in place about 100 years. They are now very much decayed on the upper part where the salt water does not reach them. The piles in four bents have been pieced out and new hard-pine girders and trusses have been firmly bolted to them.

The current repairs have been made, such as painting and sheathing the draw, cleaning roadway and sidewalks; and repairs on boiler and machinery to move the draw.

The above work has been attended to by the men on the bridge. The roadway of the bridge has been watered with salt water.,

### HARVARD BRIDGE.

The roadway has been replanked for the entire length of the bridge with 2-inch spruce plank, costing \$1,519.41 for each city.

It will be necessary to do this work every year.

The West End Street Railway Company replanked the space between their tracks with 3-inch spruce, which makes a much smoother surface for travel than the 2-inch plank did which was formerly there.

The asphalt sidewalks are in poor condition and are to be relaid next summer by the contractors, at their expense, in accordance with the terms of the contracts, which require them to keep the sidewalks in good repair for five years.

The iron-work on this bridge is in bad condition from rust. It will have to be painted in 1896.

The men employed on the bridge have done all the cleaning without extra cost to the two cities. They also clean all the lamps and make all small repairs.

#### PRISON-POINT BRIDGE.

The draw on this bridge is in very bad condition. It is almost impossible to raise it. It is not proposed to expend much money on the bridge at the present time, as the grade crossing of the Boston & Maine Railroad at this point is to be abolished. A commission has been appointed, and the proposed changes include a new highway bridge and draw built at a higher grade. It is expected that the work will be completed within three years.

Current repairs have been attended to, such as planking and sheathing draw, etc.

#### West Boston Bridge.

In October a portion of the bridge near the draw on the Cambridge side commenced settling. It was found that the piles in three bents, or sections, had settled about five inches and were still going down. Twelve new piles were driven : five in one section, four in another, and three in another. The work was done from the top of the bridge, taking one side at a time, by placing a scow on the outside of the bridge with an engine on it with the pile-driver on the bridge. The work was done without interruption to travel, and without frightening horses, as would have been done if the engine had been placed on the bridge in the usual manner.

After driving the piles from above, the work was finished under the bridge by bolting extra girder caps to the piles that were driven. Sixty-six braces,  $3 \times 12$  spruce, 20 and 25 feet long, were firmly secured to piles distributed in different bents.

The wheel-guard on both sides of the draw, the entire length, has been renewed with hard pine-timber. On the side of the wheel-guard, an iron plate 4 inches wide  $\frac{3}{2}$  inches thick, has been bolted to the timber for the whole length of the draw to protect the wood-work and to keep teams from injuring the draw.

The bridge is very weak in places. It has to bear a great strain when the ice is breaking up in the spring. Next year it will need a thorough repairing, and possibly more piles will have to be driven.

When this bridge was rebuilt it was not expected there would be such an amount of travel over it as there is at the present time, especially such heavy teaming and such heavy electric cars. The spaces between bents of piles are 18 and 19 feet, and they should be not more than 16 feet.

The men on the bridge do the ordinary repairs, looking after the cleaning, keep the machinery for moving the draw in good condition, their engine-house clean, and do all painting of wood and iron work on the draw and house. The roadway of the bridge has been watered with salt water.

The West End Street Railway Company relaid their track the entire length of the bridge in October, and, in so doing, relaid the paving on the sides of the rails in a satisfactory manner.

### IN GENERAL.

The usual statement is appended of the number of draw openings and the number of vessels which passed through, also table showing the traffic over bridges in September.

The amount of revenue received for rents, dockage, repairs to West End Street Railway Company's tracks, etc., during the year, has been \$2,303.70, one-half, \$1,151.85, has been paid to each city.

### Number of Times the Draws in Canal, Harvard, Prison-Point, and West Boston Bridges have been opened, and the number of Vessels which have passed through, for the year ending January 31, 1896.

### FERRY DIVISION.

On July 1, 1895, the Ferry Department was consolidated with the Street Department, and has been operated since that time as the Ferry Division, with a Deputy Superintendent in charge. Of the seven ferry-boats belonging to the division, six are in active use each week-day: three at the North and three at the South Ferry; one is kept as a spare boat; three are used on Sundays — two at the North and one at the South Ferry.

The following table shows the amount expended for maintenance by the Ferry Division for the last five (5) years :

1891 (1	13  mc	onths)		. :	\$216,867	81
1892 $$		•			211,567	19
1893					213,746	76
1894					212,988	13
1895		•			209,911	30

The boats of the division are from twenty-five to five years of age, and while their condition is good, each one of them having been thoroughly overhauled and painted during the past year, they should unquestionably be taken out, stripped, calked, and coppered, as some of them have not been out of the water for nine years. One of them, the "Ben Franklin," has been built up twelve (12) inches, in order to fit the drops, and the "East Boston," although five years old, has been first put in commission this year.

The head-house at the South Ferry, East Boston side, is not a credit to the city, especially as to its sanitary arrangements, which have been complained of by the Board of Health; and the coal-shed at this place is old, and its fall is not unlikely at any time.

The improvement in the service and equipment since May 1, 1895, the cost of which has been charged to maintenance, may be here referred to. A third boat has been operated at the North Ferry, as it had been apparent for some time that it was necessary for the proper service of the public, and it has been run every day except Sundays, from 7 A.M. to 7 P.M., entailing an additional expenditure from maintenance of some \$8,000.

The spare dock on the South Ferry, East Boston side, has been dredged at an expense of \$600. This dock is used to haul off boats that are to undergo repairs, and there was so little water in it at low tide that the boats rested on the bottom. One of the boats ("East Boston") was never in this dock, as it was unsafe to put her in there, and she always had to be laid at an outside wharf.

Passenger supplementary drops have been put in on South Ferry on both sides, same as at North Ferry, at a cost of about \$1,200. These were needed very badly, and should have been put in years ago, as their absence has undoubtedly been the cause of many accidents and subsequent payment of damage.

Another improvement was the running of the second boat at North Ferry at night, until 12 o'clock. Formerly it stopped at 11 o'clock, thereby discommoding hundreds of people.

By order of United States Steamboat Inspectors, the lifeboats have been removed from over the wheel-houses to forward end of canopies on all of the boats, and a skiff, with water-tight compartments, has been put on each end of canopies on ladies' side, so now each boat is equipped with a life-boat and two skiffs. These have cost about \$700.

The drops and piers at both ferries have been equipped with electric lights, superseding the old-fashioned lanterns and gas. This is one of the greatest improvements that could have been made at small expense, and it has proved an unqualified success.

During the year a pass system has been introduced on the ferries, principally for the purpose of obtaining an account of the number of teams and foot-passengers carried free, but also to restrict as far as possible the unwarranted free use of the boats. Return is now made by gatemen and collectors, of travel of this class, amounting to 2,406 teams in seven months, and 13,077 foot-passengers in three months, the time during which this method has been in operation.

The constructive work, which is paid for from loans provided for permanent improvements, has not been large during the year; the remodelling of the "East Boston" has been completed, and a new drop constructed for the South Ferry and put in place.

The amount of expenditure from loans provided for permanent improvements during the last five (5) years has been as follows:

1891 (	13 moi	iths)			\$78,030 05
1892 )					21,498 82
1893					35,623 $89$
1894					11,452 91
1895					11,902 64

The following statement of the City Engineer contains the main features of the special work of construction assigned to him by this department for engineering supervision :

### CITY OF BOSTON, ENGINEERING DEPARTMENT, 50 CITY Hall, January 31, 1895.

MR. B. T. WHEELER, Superintendent of Streets:

SIR: I herewith submit the following report of the work done under my direction for the Ferry Division of the Street Department during the year 1894.

North Ferry Pier. — March 27, 1895, a contract was made with W. H. Ellis & Co., for extending the middle pier at the East Boston side of the North Ferry. The pier was extended 30 feet at a cost for contract work of \$1,775.60.

New Drop. — A contract was made by the Superintendent of Ferries, June 20, 1895, with William McKie, to build a new ferry drop to replace the old one at the southerly side of the Boston landing of the South Ferry for 5,611. The old drop was delivered to the Ferry Division, its machinery being removed to the new drop, and the necessary changes of the foundation and landing being made.

Yours Repectfully,

[Signed]

WILLIAM JACKSON,

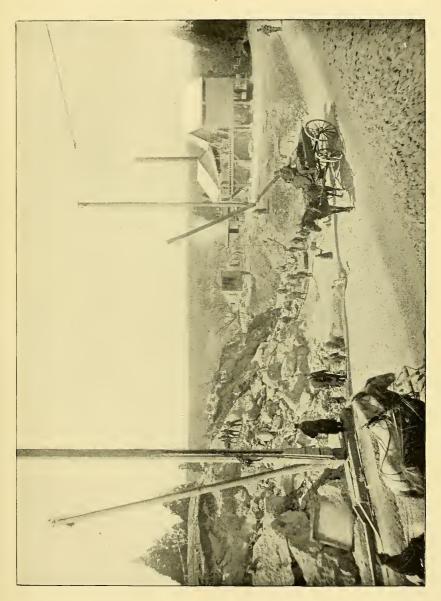

City Engineer.

An increase in the receipts of this year over last, results from an increase of foot-passengers carried of 648,469, and of teams, 30,270, and amounts to \$14,084.66.

Details of expenditure, income, and table of travel will be found in Appendix B.

#### Length in Miles.

- The above districts refer to areas enclosed by the original boundary lines. NOTE .-

* Of this amount, 0.85 miles = asphalt blocks. † Of this amount, 2.69 miles = granite block paving on concrete, with pitch joints. ‡ Of this amount, 0.75 miles = granite blocks on concrete, with cement gront joints.

Total length of public streets, 456.11 miles.

There have been laid out and accepted by the Street Commissioners during the year 3.91 linear miles; only six square feet have been discontinued; corrections to previous measurements on account of revision and correction of previous tables from all causes, show an increase of 0.08 miles; making a total net increase of 3.99 miles. Street widenings and relocations have been ordered to the extent of 163,223 square feet.

Not included in the above table, there are about 142 miles of private ways and alleys which are not under the care of this department.

The rate of increase from year to year is shown in the following table :

1859111.50 miles.	1884

The following statement of the City Engineer contains the main features of the special work of construction assigned to him by this department for engineering supervision :

### CITY OF BOSTON, ENGINEERING DEPARTMENT, 50 CITY HALL, January 31, 1896.

MR. B. T. WHEELER, Superintendent of Streets:

SIR: I herewith submit the following report of the work done under my direction for the Paving Division of the Street Department during the year 1895.

The work done is similar to that heretofore, with the addition of a large amount of work upon the five main avenues, the construction of which was authorized by the Legislature of 1895, Chapters 268 and 334, referring back to Chapter 323 of the Acts of 1891; namely, Blue Hill avenue, Columbus-avenue extension, Huntington avenue, Commonwealth-avenue extension, and Brighton avenue. These acts require the construction of sewers, gas, and water pipes in each avenue, with house connections for all abutting lots. The construction of these, together with other miscellaneous structures, such as water-main pipes, underground wires, and surface drains, intended to forestall the necessity for breaking up the surface of the finished street, require a large amount of labor to be performed before the surfacing of the street can be commenced.

In these avenues, a very large amount of this preliminary work has been done. Early in the year estimates were made of the cost of construction of these avenues, exclusive of sewers and land damages, upon a definite plan, and such rough grading as could be done in advance of sewer construction was commenced then as fast as the sewer construction was completed; contracts were made for grading. The work of grading has been in progress during the winter, and with a single exception, all the rough grading contemplated at present is under contract and should be completed by June 1, 1896. The exception referred to consists of about 20,000 cubic yards of surplus material on Blue Hill avenue opposite Franklin park. A part of this material can be used to supply a deficiency in Columbus avenue, and it is probable that the remainder can be used for contemplated improvements in the near vicinity.

### BLUE HILL AVENUE.

The portion of the avenue laid out under the act commences at Washington street or Grove Hall, and follows the course of the old Blue Hill avenue to the Neponset river at

COLUMBUS AVENUE, --- LOOKING SOUTH-WEST FROM PRENTISS STREET, TOWARD ROXBURY CROSSING, AFTER REMOVAL OF BUILDINGS.

Mattapan, a distance of 2.86 miles, nearly in a straight line. The part between Washington and Walk Hill streets, a distance of 2.21 miles, has been ordered to be constructed. The part under construction borders on Franklin Park for a distance of 2,670 feet, and Franklin Field, a distance of 1,340 feet. It is 120 feet wide throughout, and will be built for the greater part of its length with two roadways, each 32.5 feet wide, a central reservation 25 feet wide for street-cars, and two sidewalks, each 15 feet wide. The sidewalk will have a loamed space 5 feet in width next the roadway, and the central reservation will be loamed and grassed.

In front of Franklin Park this construction will be varied and provision made for easy access to the park. The roadways are to be built of Telford macadam, with paved gutters, but with edgestone from Washington street to the circle at Talbot avenue only. Ten contracts for rough grading have been made, seven of which are not completed at this date. One of these contracts includes the road construction opposite the main entrance to Franklin Park, and calls for completion of this section by August 1, 1896.

Provision has been made for saving all stone suitable for use in constructing roadways, but a large part of the rock excavated is of such inferior quality as to be only suitable for filling. The estimated quantities of grading to be done under these contracts, and the corresponding cost of doing the work, is as follows:

Earth excavation		100,796.77	cubic yards.
Rock excavation		28,600	cubic yards.

The average prices to be paid are as follows:

Earth excavation		\$0.356 per cubic yard.
Rock excavation		1.023 per cubic yard.

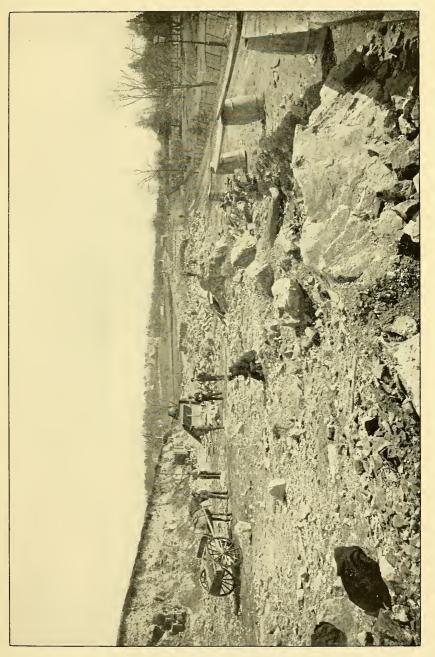

The total amount paid to contractors for work done to February 1, 1896, is \$18,663.35.

#### COLUMBUS AVENUE EXTENSION.

This avenue extends from Northampton street to Frank lin Park, by the way of Roxbury Crossing, along Pynchon to Centre street, then through vacant land to and across Washington street and by way of Seaver street to Franklin Park, a total distance of 2.21 miles. It is generally 80 feet wide, and is to be built without a special reservation for a street railway. The section between Roxbury Crossing and Hog oridge is about 3,105 feet in length and includes the present and prospective site of Stony brook; the improvement of the brook will necessarily precede the construction of the road, and, with the exception of the removal of the buildings, filling cellars, etc., no work has been or can be done at present. It is intended to pave this section with granite blocks. From Roxbury Crossing to the old part of the avenue, the roadway will be of asphalt. From Centre street to the park the roadway will be of Telford macadam. The only work done by this department has been the rough grading between Washington and Centre streets. A considerable part of the avenue will be in readiness for road-making on the opening of the working season, and with the exception of the Pynchon street section the work will be practically finished during 1896.

#### HUNTINGTON AVENUE.

This avenue extends from Copley square, along the line of the old avenue to Tremont street, and thence follows the former location of Tremont street to the Brookline line, at the Parkway, a distance of 2.25 miles. From Copley square to Massachusetts avenue, a distance of 3,240 feet, the boundary lines are unchanged, but the avenue will be rebuilt with a reserved space 25 feet wide for street cars, two roadways, paved with granite blocks, each 25 feet wide, and two sidewalks, paved with bricks, each 121 feet wide. From Massachusetts avenue to Tremont street, a distance of 1.15 miles, the avenue is widened to 100 feet, laid out in the same manner and built with Telford macadam roadways and gravel sidewalks. The part of Tremont street renamed Huntington avenue, 2,563 feet in length, has been widened to a general width of 80 feet. In this section there will be no reservation for street-cars. Roadways will be built of Telford macadam. and the sidewalks, which will be 13 feet wide, will be built of gravel. The preliminary underground work is well advanced on this avenue, and it is expected that the surfacing can be begun early in the season. The work done by this department was the resetting of the edgestones and the regulating of the sidewalks on the northerly side, between Copley square and Massachusetts avenue, and the depositing of about 10,000 cubic yards of filling between Gainsborough street and Longwood avenue. This will not complete the tilling between these points, and the balance of about 15,000 cubic yards will be supplied from the surplus on the remaining parts of the avenue. The gravel filling referred to is being furnished for \$0.793 per cubic yard, and the work will be completed in February, 1896.

.

#### BRIGHTON AVENUE.

This avenue extends from Commonwealth avenue to Union square, Allston, a length of 0.67 miles. It is 100 feet wide, and will be built with a central reservation 25 feet in width for a street railway, two roadways, the northerly one 30 feet wide and the southerly one 25 feet wide, and two sidewalks each 10 feet wide. The roadways are to be built of Telford macadam.

Preliminary underground work is well advanced and the surfacing is under contract, conditioned to be completed on September 1, 1896. Amount paid to contractors for grading, to February 1, 1896, is \$2,467.63.

### COMMONWEALTH AVENUE EXTENSION.

Commonwealth avenue has been extended from Chestnut Hill avenue, Brighton, to the Newton line, there connecting with the Newton boulevard; the extension is 0.71 mile in length and 120 feet in width. It is to be built with a central reservation 25 feet in width for a street railway, two roadways, the northerly one 25 feet wide and the southerly one 40 feet wide, and the two sidewalks each 15 feet wide. The roadways are to be built of Telford macadam. Four contracts for rough grading have been let, one of which is still unfinished. A large quantity of excellent stone for road construction has been found, and there will be a considerable surplus of stone and of loam available for other avenues. Trap rock of excellent quality is now being delivered at the city stone-crusher near by, and is being crushed and piled for future use. Eleven thousand one hundred and fifty cubic yards of surplus filling has been delivered on the adjoining section of Commonwealth avenue. The rough grading, including rock excavation, will be completed early in the season, and it is expected that the underground work can be completed in time to allow of the entire completion of the avenue during 1896. The total amount of earth excavation is estimated at 35,732 cubic yards, and of rock excavation at 9,200 cubic yards. Earth excavated and delivered within three-quarters of a mile has cost an average of \$0.284 per cubic yard; earth delivered on the adjoining section of Commonwealth avenue, hauled about one mile, has cost \$0.228 extra per cubic yard for hauling. Rock excavation, including breaking, hauling, and piling, has cost an average of \$1.30 per cubic yard measured in the cut. The total sum paid to the contractors for grading, to February 1, 1896, is \$14,070.79.

The table showing lengths and areas of paving on accepted

streets has been carefully revised and compared with the list of streets in Boston, published by the Street Commissioners. As has been before stated, there is and can be no complete and authoritative list of public streets in Boston. The older streets have become public in many instances without record, and frequently the status of streets and alleyways has been questioned in the interest of abutters. The manuscript list in this office, and from which the table has been made, is as nearly complete as it can be made at this date. In this connection it should be stated that 3,600 square yards of asphalt pavement, commenced (the concrete base only being laid) in 1894 and completed in 1895, have been credited to 1894 in the tables.

Block-stone pavement has been laid with concrete 6 inches thick with a cushion coat of sand about  $1\frac{1}{2}$ -inches thick. The material used for filling joints, adopted by the Street Department, was pebbles and Portland cement grout. The cement grout has been mixed with sand in varying quantities for experimental purposes. The proportion of one part cement to one-fourth part of fine house sand was found to give the best results, and was adopted for most of the work done. The quantity of cement used varied greatly on different jobs, the average of all work so done being 9.94 square yards of pavement per cask of cement, at a cost for cement of \$0.231 per square yard. The cost of filling joints in this manner has been about \$0.20 less than the sum paid in 1894 for pitch and pebble joints.

Street paving, on old and new streets, has been supervised in all cases where requested, and the following quantities have been laid under contracts supervised by this department:

Block-stone pavement, on a concrete base, laid with Portland cement grout joints, 14,428 square yards, at an average cost of about \$4.25 per square yard.

Block-stone pavement, on a gravel base, laid with Portland cement grout joints, 11,405.6 square yards, at an average cost of about \$3.10 per square yard.

Block-stone pavement, on a gravel base, laid with gravel joints, 13,579 square yards, at an average cost of about \$2.75 per square yard.

Trinidad sheet asphalt, with a binder course of asphaltic cement concrete, on an American cement concrete base, 10,639.3 square yards, at an average cost of about \$3.65 per square yard.

Sicilian rock asphalt, on an American cement concrete base, 7,293.7 square yards, at an average cost of about \$3.65 per square yard. Edgestones set, 36,093 linear feet; brick sidewalks laid, 20,621.5 square yards; gravel sidewalks constructed, 1,835 square yards; flagging crosswalks laid, 2,217 square yards.

The following is a statement of the streets paved and constructed, for which plans were made and grades given, and the work supervised :

Ash Street. — From Oak to Nassau street was paved by H. Gore & Co. with Sicilian rock asphalt, with a base course of bituminous concrete on the existing cobble-stone pavement. Before putting down the base course, the old cobblestone pavement was relaid by H. Gore & Co.

Barton Street. — From Leverett to Milton street was paved with Sicilian rock asphalt on an American cement concrete base. The old pavement was removed and the subgrading was done by the Paving Division. The concrete base and asphalt surface was laid by the Boston Asphalt Company. The edgestones were reset and the brick sidewalks relaid by H. Gore & Co. The pavement removed was old cobble-stones and granite blocks.

Billerica Street. — From Causeway to Minot street was paved with large granite blocks, on a gravel base, with Portland cement grout joints. The old pavement was removed and sub-grading done by the Paving Division. The roadway was paved, brick sidewalks relaid, and edgestones reset by A. A. Libby & Co. The pavement removed was old cobble-stones.

Bond Street. — From Hanson to Milford street was paved with Trinidad asphalt, with asphaltic cement concrete binder on an American cement concrete base. The street was subgraded by the Paving Division. The concrete base and asphalt surface was laid by the Barber Asphalt Paving Company. The edgestones were reset and brick sidewalks relaid by T. H. & W. A. Payson. The former surface was macadam.

Brimmer Street. — From Beacon to Pinckney street was paved with Trinidad asphalt, with asphaltic cement concrete binder on an American cement concrete base. The subgrading was done by the Paving Division. The concrete base and asphaltic surface were laid by the Barber Asphalt Paving Company. Edgestones were reset, brick sidewalks and flagging cross-walks were relaid by T. H. & W. A. Payson. The former surface was macadam.

Chambers Street. — From Brighton to Charles street was paved with Trinidad asphalt, with asphaltic cement concrete binder. That portion from Brighton street through Auburn street has an American cement concrete base; that portion from Auburn to Charles street was laid on old cobble-stone pavement. The concrete base and asphalt surface were laid by the Barber Asphalt Paving Company. Sub-grading was done by the Paving Division. Edgestones were reset, brick sidewalks and flagging cross-walks relaid by T. H. & W. A. Payson. The former pavement was old cobble-stones.

Charles Street (easterly side). - From Pinckney to Cambridge street, including the easterly track of the West End Street Railway, and also the four-foot space between the tracks, was paved with large granite blocks, with Portland cement grout joints, on an American cement concrete base. The old pavement was removed and sub-grading done by the Paving Division. Concrete base and block paving was laid, edgestones reset, and brick sidewalks relaid by H. Gore & Co. The former pavement was old granite blocks. The West End Street Railway, by agreement, paid for the work done in their tracks. Work in front of the Eve and Ear Infirmary, which had been postponed on account of unfavorable weather the previous season, was completed. The crushed stone, which was used to make the street passable temporarily, was taken off and about four inches of the concrete base was removed and replaced with four inches of Portland cement concrete, on which 24 inches of Sicilian rock asphalt was laid by H. Gore & Co.

Charter Street. — From Unity street to Jackson avenue was paved with large granite blocks, on a gravel base, with Portland cement grout joints. The old pavement was removed and the sub-grading done by the Paving Division. The roadway was paved, brick sidewalks relaid, and edgestones reset by C. L. Ward. The pavement removed was old cobble-stones.

Columbus Avenue. — From Park square to beyond Ferdinand street was paved with large granite blocks, on an American cement concrete base, with Portland cement grout joints. The old pavement was removed, the sub-grading done, the concrete base laid, the roadway paved, edgestones reset, and brick sidewalks relaid by H. Gore & Co. The West End Street Railway, by agreement, paid for the work done in their tracks. Two new catch-basins were built. The former pavement was old granite blocks.

Devonshire Street. — From Franklin to Milk street was paved with large granite blocks, on an American cement concrete base, with Portland cement grout joints. The old pavement was barred out and loaded, the sub-grading was done, concrete base laid, the roadway paved, and flagging cross-walks laid by James Grant & Co. The Paving Division furnished teams for carting away surplus material. The former pavement was old granite blocks.

Edinboro Street. — From Essex to Beach street was paved with Trinidad asphalt, with an American cement concrete base and asphaltic cement concrete binder, by the Barber Asphalt Paving Company. The sub-grading was done by the Paving Division. The edgestones were reset and brick sidewalks relaid by P. Brennan & Co. The former surface was macadam.

Fabin Street. — From Newland to Ivanhoe street was paved with Sicilian rock asphalt, with an American cement concrete base, by the Boston Asphalt Company. The subgrading was done by the Paving Division. Edgestones were reset, brick sidewalks and cross-walks relaid, by H. Gore & Co. The former pavement was cobble-stones.

Harrison Avenue (westerly side). — From about 85 feet south of East Newton street to about 100 feet south of East Springfield street, and (easterly side) from East Newton street, through Stoughton street, was paved with Trinidad asphalt, on an American cement concrete base, with asphaltic cement binder, by the Barber Asphalt Paving Company. The sub-grading was done by the Paving Division. The former pavement was granite blocks.

Henchman Street. — From Charter to Commercial street was paved with large granite blocks, on a gravel base, with Portland cement grout joints. The sub-grading was done by the Paving Division. The roadway was paved, edgestones reset, brick sidewalks and flagging cross-walks relaid by J. B. O'Rourke & Co. The former surface was macadam.

Lancaster Street. — From Causeway to Merrimac street was paved with large granite blocks, on a gravel base, with Portland cement grout joints. The sub-grading was done by the Paving Division. The roadway paved, edgestones reset, brick sidewalks and flagging cross-walks relaid by John Turner & Co. The former pavement was asphalt, so worn that the cobble-stones on which it was laid were exposed for large areas.

Massachusetts Avenue (southerly side). — From Washington to Albany street was paved with Sicilian rock asphalt, on an American cement concrete base, by H. Gore & Co. Work on the above, which had been postponed on account of unfavorable weather the previous season, was completed in June, 1895. A part of the asphalt surface, which was laid in 1894, was taken up and relaid, the surface of the concrete base scraped off and repaired, in part with Portland cement concrete, and in part with an asphaltum concrete binder. Merchants Row. — From State to North street was paved with large granite blocks, on an American cement concrete base, with Portland cement grout joints. The sub-grading was done by the Paving Division. The concrete base put down, paving laid, edgestones reset, brick sidewalks and flagging cross-walks relaid, by A. A. Libby & Co. The former pavement was granite blocks.

North Margin Street. — From Thatcher to Stillman street was paved with Trinidad asphalt, on an American cement concrete base, with asphaltic cement concrete binder, by the Barber Asphalt Paving Company. The sub-grading was done by the Paving Division, edgestones were reset, and brick sidewalks were repayed by T. H. & W. A. Payson. The former pavement was part cobble-stones, part old asphalt on cobbles, and part macadam.

Otis Street. — From Summer street to Winthrop square was paved with large granite blocks, on gravel base, with Portland cement grout joints. The old pavement was barred out and loaded, the sub-grading was done, the roadway paved, and the flagging cross-walks relaid by James Grant & Co. The Paving Division furnished teams for carting away the surplus materials. The former pavement was old granite blocks.

Oxford Street. — From Beach to Essex street was paved with Trinidad asphalt, on existing macadam, with asphaltic cement binder and base course, by the Barber Asphalt Paving Company.

*Pinckney Street.* — From Charles through Brimmer street was paved with Trinidad asphalt, on an American cement concrete base, with asphaltic cement concrete binder, by the Barber Asphalt Paving Company. The sub-grading was done by the Paving Division. The edgestones were reset, and the brick sidewalks repaved by T. H. & W. A. Payson. The former surface of the street was macadam.

Prince Street. — From Hanover street to Bennett avenue was paved with Sicilian rock asphalt, on an American cement concrete base, by H. Gore & Co. The existing block pavement was removed, and the sub-grading done by the Paving Division. Edgestone were reset, brick sidewalks and flagging cross-walks were relaid by H. Gore & Co. The old paving-blocks were used on Barton street and on Noyes place. The former pavement was old granite blocks.

Spring Street. — From Poplar to Leverett street was paved with Trinidad asphalt, with asphaltic cement concrete base course and binder, on existing cobble-stone pavement, by the Barber Asphalt Paving Company. The edgestones were reset, and the brick sidewalks and flagging crosswalks relaid by J. Turner & Co. The former pavement was cobble-stones.

Summer Street (northerly side). — From Washington to Federal street, with the exception of a part at High street, was paved with large granite blocks; on an American cement concrete base, with Portland cement joints. The sub-grading was done by the Paving Division. The paving was laid, the edgestones reset, and the brick sidewalks and flagging cross-walks relaid by James Grant & Co. By agreement, the West End Street Railway Company paid for 1,438.7 square yards, at the rate of \$0.38 per square yard; and the Edison Electric Illuminating Company paid for 936.3 square yards, at the rate of \$0.38 per square yard. The former pavement was old granite blocks.

*Tileston Street* — From Salem to Wiggin street was paved with Trinidad asphalt, on an American cement concrete base, with asphaltic cement concrete binder, by the Barber Asphalt Paving Company. The sub-grading was done, the edgestones were reset, and the brick sidewalks relaid by the Paving Division. The former pavement was old cobblestones.

Warren Street (Charlestown). — From Winthrop to Soley street was paved with Sicilian Rock asphalt, on an American cement concrete base, by the Boston Asphalt Company. The sub-grading was done by the Paving Division. The edgestones were rest, the brick sidwalks and flagging crosswalks relaid by John Turner & Co. The pavement removed was old granite blocks.

West Street. — From Tremont to Washington street was paved with large granite blocks, on an American cement concrete base, and Portland cement grout joints. The old payment was removed, the sub-grading done, the concrete base laid, the paving laid, the edgestones reset, the brick sidewalks and flagging cross-walks relaid by H. Gore & Co. The former pavement was old granite blocks.

Whitmore Street. — From Kneeland to Harvard street was paved with Sicilian rock asphalt, on an American cement concrete base, by the Boston Asphalt Company. The subgrading was done by the Paying Division. The edgestones were reset and the brick sidewalks and flagging crosswalks relaid by H. Gore & Co. The former pavement was macadam.

## NEW STREETS.

Construction on the following streets has been done under Chapter 323 of the Acts of the Legislature of Massachusetts of 1891, and Acts in amendment thereof or in addition thereto. Five of them; namely, Boylston street, Ivy street, Norway, Parker, and St. Germain streets were commenced in 1894.

Boylston Street. — From Boyston road to Brookline line is about 2,070 feet long. The work of filling to sub-grade was begun on this street in 1894 and completed April 27, 1895, at a total cost of \$47,819.37, at the rate of  $0.62\frac{1}{2}$  per cubic yard. The contractor was John O'Brien. No contracts have yet been made for constructing the street, as extensive sewer construction upon piles is in progress.

Harvard Avenue. — From Commonwealth avenue to the Brookline town line is about 550 feet long. The contract for constructing this avenue was awarded to William Scollans. Work was commenced October 19, 1895, and completed December 21, 1895, at a total cost of \$3,313.09. This is a Telford macadam road, with gravel sidewalks; the base is eight inches and the surface four inches in thickness. Telford stone and crushed stone was furnished and delivered by the city; the edgestones were furnished by the city and hauled by the contractor.

Ivy Street. — From St. Mary to Mountfort street, not including the Audubon road intersection, is about 772 feet long. Work was begun on this street in 1894 and completed June 15, 1895, at a total cost of \$7,322.44. It is a 6-inch macadam road with 'brick sidewalks. The contractors were James Grant & Co. Crushed stone was furnished and delivered by the city: the edgestones were furnished by the city and hauled by the contractor.

Kenmore Street. — From Commonwealth avenue to Newbury street is about 239 feet long. The contract for constructing this street was awarded to Doherty & Connors. Work was begun July 22, 1895; and completed August 12, 1895, at a total cost of \$974.23. It is a 6-inch macadam road with brick sidewalks. The crushed stone was furnished and delivered by the city; edgestones were furnished by the city and hauled by the contractors.

Norway Street. — From Massachusetts avenue to Falmouth street is about 610 feet long. The contract for constructing the street was awarded to Quimby & Furguson. Work was begun May 21, 1895, and completed August 7, 1895, at a total cost of \$3,162.27. This is a Telford macadam road, with brick sidewalks, the base is eight inches and the surface four inches in thickness. Telford stone and crushed stone were furnished and delivered by the city; the edgestones were furnished by the city and hauled by the contractors.

Parker Street. — From Huntington avenue to Westland avenue is about 1,687 feet long. Work was begun on this street in 1894, as noted above, and completed June 19, 1895, at a total cost of \$23,850.26. The contractors were Doherty & O'Leary. It is a Telford macadam road, with brick sidewalks; the base is ten inches and the surface six inches in thickness. The contractors furnished all materials used in constructing this street.

St. Germain Street. — From Massachusetts avenue to Dalton street is about 749 feet long. Work was begun on this street in 1894, and completed June 8, 1895, at a total cost of \$4,923.36. The contractors were Quimby & Ferguson. It is a Telford macadam road, with brick sidewalks; the base is eight inches and the surface four inches in thickness.

Sherborn Street. — From Commonweath avenue to Charles river is about 464 feet long. The contract for constructing this street was awarded to Doherty & Connors. Work was begun July 23, 1895, and completed October 5, 1895, at a total cost of \$4,214.21. This is a 6-inch macadam road, with gravel sidewalks. In addition to the above work, a capstone and iron fence were placed upon the sea-wall at the river; the capstone was furnished and laid by Joseph Ross for \$4.92 per lin. foot for 64 feet, or \$315. The iron fence, built and erected by P. J. Dinn, for \$118, is 63 feet 9 inches long. Crushed stone was furnished and delivered by the city; edgestones were furnished by the city and hauled by the contractor.

# GRADING STREET-RAILWAY TRACKS.

The grades for tracks in the following streets have been determined and furnished to the street railway companies. On streets marked * the surveys were made and levels taken by the railway companies.

### WEST END STREET RAILWAY.

Battery Sireet. — From Commercial street to North Ferry. Brighton Avenue. — From Commonwealth avenue to Cambridge street.

* Brookline Avenue. — From Longwood avenue to the Fenway.

* Caldwell, Perkins, and Brighton Streets (Charlestown). — From Main to Cambridge street.

* Chelsea Street (Charlestown). — From Bunl er Hill street to Vine street.

Columbus Avenue. — From Park square to beyond Ferdinand street.

* Commonwealth Avenue. — From St. Paul street o beyond Essex street. *East Sixth Street.* — From N street to O street.

Harvard Avenue. — From Commonwealth avenue to Brookline line.

Huntington Avenue. — From 200 feet north of Vancouver street to beyond Longwood avenue.

Longwood Avenue. — From Autumn street to Huntington avenue.

Lowell Street. — From Causeway street to Brighton street.

* Norfolk Street. — From Washington street to the N. Y. & N. E. R.R. bridge.

P Street. — From Fourth street to Sixth street.

* Shawmut Avenue. — From Dover street to Roxbury street.

* Summer Street. — From Washington street to Kingston street.

Summer Street. — From Kingston street to Federal street. * Warren Street. — From Dudley street to Grove Hall.

Washington Street. - From Parsons street to Oak square.

NORFOLK SUBURBAN STREET RAILWAY.

* *River Street.* — From Blue Hill avenue to the Lower Mills.

LYNN & BOSTON STREET RAILWAY COMPANY.

* * Chelsea Street. — From Vine street to Scotts court.

#### MISCELLANEOUS WORK.

Ashmont Street and Dorchester Avenue Bridge. — Plan and proposed grades for additions to the bridge over the N. Y., N. H., & H. R.R. (Old Colony System), necessitated by the construction of the Talbot-avenue extension.

Algonquin and Bradlee Streets. — Plan of proposed park eurbing for planting space.

Sherborn Street. — Plans of proposed granite capstone for sea-wall, and also for iron fence.

*Catch-Basins.* — Details of coping and gutter stones for eorners, Bradlee pattern.

*Riverside Gravel Bank*, (Auburndale). — Plan and crosssection of bank for gravel used for filling on Boylston-street extension.

Harrison Avenue (From East Newton street to East Springfield street). — Plan showing limits of asphalt pavement under guarantee.

Commonwealth Avenue (at Washington street.) — Plan and cross-section of ledge for measurement.

Chelsea Street (at Scotts court). — Plan and profile showing grades of edgestone for the B. & M. R.R. Company.

Surveys, plans, and estimates for improving and paving the following streets have been made :

Barton Street. - From Lowell street to Minot street.

Beacon Street. — From Arlington street to Dartmouth street.

Doane Street. - From Kilby street to Broad street.

Garland Street. — From Washington street to Shawmut avenue.

Harrison Avenue. — From Harvard street to Kneeland street.

Lowell Street. — From Causeway street to Brighton street. Newbury Street. — From Arlington street to Dartmouth street.

Surveys and plans were made for work upon the following streets: grades and lines given, but the work of construction was not supervised by this department:

Austin Street (Charlestown). — From the Fitchburg Railroad track to the B. & M. R.R. track was paved with large granite blocks on a gravel base with gravel joints.

Barrett Street. — From Fulton street to North street was paved with large granite blocks, on a gravel base, with Portland cement grout joints; the old pavement was removed and the sub-grading done by the Paving Division. The roadway was paved, the edgestones reset, and the brick sidewalk relaid by A. A. Libby & Co. The former pavement was of cobble-stones.

Barton Street. — From Leverett street to Lowell street was paved with granite blocks taken from Prince street and from part of Barton street. The blocks were laid on a gravel base with gravel joints. The old pavement was taken up and sub-grading done by the Paving Division. The roadway was paved, the edgestones reset, and the brick sidewalks relaid by J. Turner & Co. The pavement removed was of old granite blocks.

Castle Street. — From Washington street to Tremont street was paved with granite blocks, on a gravel base, with Portland cement grout joints. The sub-grading was done by the Paving Division; the roadway was paved, the edgestones reset, brick sidewalks and crosswalks relaid by James Grant & Co. The old pavement was taken up and relaid. Commonwealth Avenue. — From Cottage Farm bridge to Warren street, lines and grades were given and measurements made for a large amount of work done upon this part of the avenue by the Street Department.

*East Eighth Street.* — From H street to K street was paved with large granite blocks on a gravel base, with gravel joints. The sub-grading was done by the Paving Division. The roadway was paved, edgestones reset, brick sidewalks and cross-walks relaid by J. B. O'Rourke & Co. Two new eatch-basins were built. The former surface was macadam.

*East Sixth Street* (northerly side). — From N street to O street was paved with large granite blocks, on a gravel base, with gravel joints. The sub-grading was done by the Paving Division. The roadway was paved, edgestones reset, and the brick sidewalks and flagging crosswalks relaid by J. B. O'Rourke & Co. The former surface was macadam.

Lewis Street. — From Commercial street to North street was paved with large granite blocks, on a gravel base, with Portland cement joints. The sub-grading was done by the Paving Division. The roadway was paved, the edgestones reset, and the brick sidewalks and flagging cross-walks relaid by A. A. Libby & Co. The former pavement was cobblestones.

Maverick Street. — From Chelsea street to the B. & M. R.R. crossing was paved with large granite blocks, on a gravel base, with gravel joints. The sub-grading was done by the Paving Division. The roadway was paved, the edgestones reset, and the brick sidewalks relaid by C. L. Ward. The former pavement was part cobble-stone and part macadam.

P Street. — From Fourth street to Sixth street was paved with large granite clocks, on a gravel base, with Portland cement grout joints. The sub-grading was done by the Paving Division. The roadway was paved, the edgestones reset, and the brick sidewalks relaid by J. B. O'Rourke & Co. The former surface was macadam.

The work done by the Surveying Division of this department, for the Street Department, has been almost exclusively in the giving of street lines and grades, for setting and resetting curbstone, laying brick sidewalks, and the measurement of the work so constructed, together with the measurement of some granite paving-work, not supervised by this department, on Baldwin, Burbank, Bristol, D, Chambers, Merrimac, Oak, Richards, and Wapping streets.

The total amount of work measured by the Surveying Division for the Street Department during the year is as follows:

# STREET DEPARTMENT.

Edgestone set and reset, lin. ft.		129,382
Block stone paving, sq. yds		60,473
Round-stone paving (gutters) sq. yds.		32,941
Brick sidewalk paving, sq. yds.		68,701
Artificial stone sidewalks, sq. yds.		12,295
Asphalt paving, sq. yds.		1,297
Coal-tar concrete walks, sq. yds.		183
·		

Yours respectfully,

# [Signed] WILLIAM JACKSON,

City Engineer.

In addition to the work above described in detail, in the report of the City Engineer, street construction and resurfacing has been carried on by the permanent force of the Division and is given below by districts in the approximate order of construction.

### STREET OPENINGS.

A fertile source of annoyance to the travelling public, the real-estate owner and this department, is the subject of street openings. The recent acts by which streets are constructed and assessed upon the abutters, provide that servicepipes for sewer, water, and gas shall be laid to the sidewalk line, and that the street shall not be again opened for the space of two years, "except in case of obvious necessity." An ordinance of the city of Boston provides that when about to construct or resurface a street, the Superintendent shall give notice to all persons authorized to place any structure in such street, and after the completion of the work shall not permit an opening to be made therein for the space of one year, "except in case of obvious necessity."

It is apparent at once that the construction of the words 'obvious necessity" must be a much disputed subject.

There is still a larger number of streets which have no legislative protection, but whose constant reopening and repair of surface thereafter is a continual drain upon the public treasury.

The landholder, who is about to construct a building, and who claims not to have seen the published notice, requires water, gas, and sewer connections, and while in most cases he has been careless or indifferent in providing himself with these necessities to a tenantable building, the blame is usually charged to the contractor or to some one for whom the owner does not feel personally responsible; and a claim is made that no encouragement is given for the development of property and increased taxation if the owner is compelled to hold his property useless for a year or a portion thereof.

There is a certain claim of right in this, and it may be said that real-estate owners have a right to these necessities at all reasonable seasons of the year; granted that such openings should be permitted in a newly surfaced street, some method other than those at present in vogue must be employed to protect the department and the tax-payer against increased outlay and expense on this account. The difficulty is not that the corporation or persons so opening *cannot*, but that they *do not* replace the pavement in as good condition as when originally laid.

The remedy, then, seems to be, that every party, having the right to open the streets, be required to make a deposit with the City Treasurer, upon which this department may draw for the expense in making the pavement good with its own force, and that this deposit be renewed from time to time as required by the department, no permit being issued

### STREET DEPARTMENT.

until such deposit is made. This, in itself, would have a salutary effect in causing the exercise of greater care in complying with the regulations of the department, and would make it possible to restore the surface to its original condition without expense to the department and the public.

In an attempt with the authority the department now has to get the best results possible from the work of the companies opening the streets, the following regulations and instructions were issued :

#### CITY OF BOSTON.

#### STREET DEPARTMENT - PAVING DIVISION.

#### Instructions for Inspectors.

Inspectors are to be appointed by the Superintendent of Streets, and are to have charge, under the direction of the Deputy Superintendent of the Paving Division, of all openings made in, and obstructions of, the public streets of the City of Boston, by corporations having the right to lay, maintain, or repair rails, wires, pipes, or conduits therein.

Inspectors are to be paid by the corporation whose work they have in charge at the rate of \$3.00 per day of nine hours. When their services are required for ten hours, they are to receive 30 cents for the tenth hour; for all time over this, and for all work on Sundays and holidays, they are to receive "time and a half," or 45 cents per hour. When corporations are excavating trenches over time, they will not require the service of an Inspector; but when they are back-filling or surfacing the street, the Inspector must be present.

The Inspector must make a daily report, in writing, to the Deputy Superintendent of the Paving Division of the work of which he is in charge; and he must also be on his work from 7 A.M. to 5 P.M. There is to be only one Inspector on a trench, and he is to be held responsible for the condition of the trench.

In the refilling of trenches the best of the excavated material is to be carefully replaced in the trenches, and thoroughly consolidated by ramming.

Paved Streets. — The trenches are to be refilled and paved to an even longitudinal grade, and in case this method leaves any sags or depressions in the existing roadway, within a distance of ten feet from the side of the trench, such sags are to be taken up and repaired with material of the same character and quality. If any of the paving stones are broken, or are unfit for use, they must be replaced with large granite blocks of the standard specifications of the Street Department.

Macadam Streets. — The trenches are to be refilled to an even longitudinal grade, and all macadam material is to be replaced on top of the trench; and in case the macadam has been wasted, or is insufficient to make a depth of eight inches, new crushed stone is to be furnished. In case this method leaves sags or depressions in the present roadway, within a distance of ten feet from the side of the trenches, such sags are to be refilled with crushed stone, and the whole surface of the trench and the sags which have been refilled are to be covered with gravel binder, thoroughly wet down, and rolled to a hard, uniform surface.

The above directions apply also to gravel streets, except that a good quality of coarse gravel shall be used instead of broken stone.

The above directions apply to all ordinary work; and inspectors are to carefully examine all permits that are granted for opening trenches, in order to see whether they contain special instructions for doing the work; and in case such special instructions are given, the Inspectors are to see that they are carefully followed.

The Inspectors can allow parties opening streets under a permit to tunnel under crossings; but after the pipes are laid and the back-filling commences, the Inspectors must see that the tunnel is broken down, and the crossings carefully relaid.

In case any corporation refuses to obey these instructions, the Inspector on the work is to take the permit, and report to the Deputy Superintendent of the Paving Division; and this shall be a revocation of the company's right to open the streets.

#### B. T. WHEELER,

Superintendent of Streets.

BOSTON, June 5, 1895.

Twenty thousand four hundred and forty eight (20,448) permits were granted during the past year to open streets. The excavations made under these permits aggregate 266.4 miles in length, and show the extent of this work.

The Street Department has been accustomed to grant to the various gas and other companies, whose work would in certain cases admit of no delay, a so-called "emergency permit," which allowed excavations to be made without special permission being obtained, the only requirement being that a daily return of openings made under this form of permit should be forwarded to the office of the superintendent.

Five thousand and ninty four (5,094) openings of an average length of six feet each were made under "emergency permits" for breaks in water and gas pipes which were alleged to require immediate attention. These openings were made under 106 permits.

In addition to the above permits, various other permits have been issued to pedlers, mechanics, and others, for different purposes, fifteen thousand eight hundred and thirty six (15,836) in number; making the total number of permits issued thirty six thousand two hundred and eighty four (36,284).

#### SMOKE NUISANCE.

A review of the work of the past year, in enforcing the statutes for the abatement of the smoke nuisance in the City of Boston shows very good results not alone in the adoption of many patent devices and the use of smokeless fuels, but since the passage of the new law, operative on July 1, 1895, owners of estate have shown a very liberal spirit in the matter. This is mainly due to the persistent work of the observers and the almost constant patrolling of the city, which is divided into districts, more especially the congested or business portion. This section of the city has been receiving special attention, the observers patrolling some part of it every day; and so familiar have they become with the condition and location of the various stacks that any slight change is immediately noticed and steps are at once taken to find out the causes. This diligence on the part of the observers has resulted in the discovery of two places using a cheap and inferior grade of fuel, presumely on trial.

It was formerly the custom to bring the complaints to the attention of the engineer in an effort to keep them within bounds, but of late these complaints have been brought directly to the attention of the owners, and frequent visits have resulted in changes which have been very beneficial to the community and in the direction of economy.

While the work performed by the observers and the frequent visits to the owners has had a most salutary effect, and tends to keep in check a great deal of carelessness heretofore exhibited by the stokers, yet the increased consumption of coal, made so by the additional demands on the plant, and in some cases, the addition of work beyond the capacity of the boilers, makes the usefulness of the patrol system more and more pronounced.

During the past year 11 complaint notices were served and 12 inspections made, making a total of 330 notices served and 312 inspections completed. This shows 18 more notices served than inspections made, which may be classified as follows: Error, 1; duplicates, 2; refused to give information, 3; moved or closed down, 12.

In the latter part of 1894, it was very evident that the law of 1893, Chap. 353, entitled "An Act to Abate the Smoke Nuisance in Large Cities," was very lenient, and to say the least, somewhat inoperative, in view of which the matter was taken up by many merchants doing business in the central section of the city, who were affected by the then existing smoke nuisances, and a bill embodying their ideas was submitted to the Legislature of 1895, and was referred to the Committee on Cities. After a two days' hearing, the Merchants Association, being represented by Hon. A. E. Pillsbury, the soft coal dealers and consumers by Mr. E. W. Burdett, and the City of Boston by Corporation Counsel A. J. Bailey, the committee reported a bill — House Document, No. 1048 - now known as Chap. 389, entitled "An Act to Abate the Smoke Nuisance in the City of Boston." This Act was signed by the Governor in the latter part of May, to take effect July 1.

Immediately following the passage of said Act, the chief inspector waited upon the owners or representatives of a number of boiler plants that were likely to become amenable to the law, sooner or later, when the demand on their plant should happen to be increased, and called their attention to the new law, and of the intention of this department to strictly enforce the same.

The success of this method of notification was very gratifying, as in nearly every case visited a disposition was shown to comply with the law, either by the adoption of a smokeconsuming device or a change of fuel; in some cases it simply requiring a closer attention to the boilers, and a change in the method of firing by the stoker. In some instances the owners were willing to subject themselves to considerable expense, that they might, as law-abiding citizens, contribute to the public comfort and general cleanliness of the city.

The boiler plants, the owners or representatives of which have been interviewed in relation to the new law, are as follows:

Of the above, the Cobb Boston Tea Company, City Hospital (new), J. W. Dammerall, Moulton Café, Pigott & Son, C. M. Priest, G. W. Sammett & Son, and United States Hotel Company, adopted the use of hard coal. Smoke-consuming devices were adopted by the following: Boston Globe, Briggs, Hoffman, & Co., Dwinnell, Wright, & Co., Guyer Hat Company, Hollis Cold Storage, Houghton & Dutton, Hutchins Church Organ Company, Krey & Co., H. & J. Pfaff, A. W. Perry, Rich Building, Nathan Robbins estate, Sears estate, 41 Arch street, Shepard, Norwell, & Co., R. H. White & Co., and G. W. Young.

H. & J. Pfaff and Shepard, Norwell, & Co were equipped with a fire brick arch furnace, known as the "Central Draft Furnace," and in both plants the device was short-lived. G. W. Young, who burns mainly shavings, equipped his plant of two boilers with the "Lord Device," a steam and air arrangement, and the device not proving satisfactory has since been ordered out. Smith's Brewery, Marginal street, East Boston, was equipped with the "Andrews Hot Air Device," and a recent visit to the plant found it burned out. A. W. Perry, Sullivan place, was equipped with a patent deflector inserted in the smoke-flue, and the same has been recently taken out.

In addition to the above work, the observers were notified to report all upright boilers used by contractors, if burning soft coal. When these were found on principal thoroughfares, the owners attention was called to the new law, and also to the menace and nuisance likely to exist, and they invariably adopted the use of hard coal, that being particularly adapted to the upright type. Among these notified were the three subway contractors, Messrs. Jones & Meehan, Mr. Everson and Mr. Shaw, John S. Jacobs & Son, C. H. Williams, and Mr. Carson, Chief Engineer of the Boston Transit Commission.

# Observations.

A large number of short observations, covering only a few firings, have been taken by the observers on various plants throughout the city since the passage of the new law, with a view of getting violators of the five-minute clause. When a violation is found, the attention of the boiler-plant owner is called to it, and assurances are received that the matter will receive his earliest attention. Other observations have been made at the request of boiler-plant owners, who having equipped their plant with devices, and before accepting the same, wished the city to pass upon them. These latter observations with reports are on file.

# NOVA SCOTIA COAL.

The following table shows the number of tons and value of importations of Nova Scotia coal recorded at the port of Boston for the year ending Jan. 31, 1896, no coal being received from Feb. 1 to July 31.

Month.				Tons.	Value.
August.				3,727	\$6,708
September				1,398	1,699
October				5,658	9,877
November				2,834	5,791
December				4,376	7,877
January, '96	3			3,777	6,799
Total	•	•	•	21,770	\$38,754

Apparently this coal in the main is sold outside the city limits, and the few plants in this city who have been found using it are located in out-of-the-way places, and are mixing it with hard coal screenings.

REGULATIONS COVERING PERMITS FOR NEW BOILERS.

As a result of our standing objection, filed with the Building Department, 135 boiler applications have been received and disposed of as follows:

House-heating fur	naces	and 1	hot-wa	ater l	neaters	(har	ď	
coal).	· .							60
Signed to use hard	l coal							39
Adopted devices								13
Gas and other eng								9
Granted by depa								
which were fo								8

Unsigned		•	•				3
Applications withdrawn	•		•	•	•		<b>2</b>
Screenings and soft coal	mixed	•	•	•	•	•	1

135

According to a recent ruling of the Corporation Counsel arrangements have been made for filing objections in each individual case with the Building Commissioner, and the boiler permit will not be granted until objection is waived by this department or objections overruled by the Board of Appeal. (Chap. 419, Acts of 1892.)

# Special Reports.

- March 1. Report on attachment of Smith Setting under boilers on Devonshire Building, Devonshire, corner State street.
- March 7. Report on complaint against C. M. Priest, 102 Dartmouth street.
- March 14. Report on boiler plant connected with the Boston Water Board, 710 Albany street.
- April 12. Report with observations on plant of the D. S. McDonald Company, rear 50 Winter street.
- April 16. Report on boiler plant, Milton place, owned by the Boston University.
- April 26. Report on device in use at Hollis Cold Storage, 20 North street.
- May 3. Report on Church Cleansing Company, Kemble street, Roxbury; Moulton Café, 24 Summer street, and W. J. Sullivan, Swett street.
- May 21. Report on Sears estate, 41 Arch street.
- June 27. Report on hoisting boilers owned by John S. Jacobs & Son and Jones & Meehan.
- June 27. Report on Vieth's Spa, Washington street, corner Boylston square; Sears estate, 41 Arch street; Mudge & Son, Franklin street; E. F. Crosby, 470 Harrison avenue.
- June 27. Report on complaint made by the secretary of the Exchange Club, Milk street.
- June 28. Report on Houghton & Dutton, Tremont street.
- July 12. Report on J. W. Dammerall, 94 High street.
- July 24. Report on City Laundry, Lenox street.
- July 24. Report on Boston Towboat Company and Murray's Planing Mill, Border street, East Boston.
- July 31. General Report.
- August 8. Report on Boston Gaslight Company, Commercial street.

- August 9. Report on Guyer Hat Company, 132 Hampden street.
- August 12. Report on complaint against Wm. Mills & Co., 235 Washington street.
- August 15. Report on Sears estate, 41 Arch street.
- August 26. Report on Boston Bolt Company, 29-33 Purchase street.
- September 6. Report, with observations, on Houghton & Dutton, Tremont street.
- October 7. Report on C. M. Priest, 102 Dartmouth street.
- October 28. Report, with observations, on Sears estate, 41 Arch street.
- November 13. Report on Beacon Lamp Company, Parker, near Haviland street.
- December 2. Report on complaint of Bamber, Jacobs, & Louis, 31 Otis street.
- December 2. Report, with observations, on W. H. Elliott, Oak square, Brighton.
- December 14. Report on complaint against Owen Nawn, Paul Gore street, Jamaica Plain.
- January 21, 1896. Report, with observations, on Boston Gas Company, Commercial street.
- January 22. Report on Boston & Maine Electric Light Station, Minot street.
- January 27. Report, with observations, on Sears Building, Washington, corner Court street.

# SANITARY DIVISION.

The work of the Sanitary Division includes the removal of house-offal and the removal of house and store dirt and ashes, accumulated from the burning of materials for heating buildings and for domestic purposes.

The following table shows the amounts expended for the maintenance of the Sanitary Division for the past five (5) years:

1891 (1	13 montl	hs)		509,342 24
1892		•		469,370 74
1893				481,300 63
1894				467,459 02
1895	•			432,778 52

But few complaints have been received concerning the failure of the division to promptly remove offal and ashes; investigation of these has usually shown that either offal has not been properly separated from ashes or other refuse, as is insisted upon by the department, or else that the receptacles were deposited in some inaccessible place, or were larger than the ordinances provide and the regulations of the department permit.

In order that householders might understand these regulations, and that easy access would be given employees to the receptacles, and the work not unnecessarily delayed, the following circular was issued:

#### CITY OF BOSTON.

#### STREET DEPARTMENT - SANITARY DIVISION.

#### Notice to Householders.

Attention is called to the following sections of the revised ordinances of the City of Boston:

#### CHAPTER 43.

SECT. 14. No person shall keep in his house, or on his land, any house-offal, unless the same is placed in a suitable vessel, free from ashes and other refuse matter, and so placed as to be easily removed.

ashes and other refuse matter, and so placed as to be easily removed. SECT. 17. No person shall place or keep, in or near any building, ashes or cinders in such a manner as to be liable to cause fire, nor mix them with other substances, nor place or keep them except in metallic vessels, so placed as to be easily removed. The regulations of this department require that all receptacles for ashes or offal, shall be placed either at the curbstone or in an easily accessible place on the level of the lot on which the building stands.

Employees of this department are not supposed to enter cellars, cellarways, areas, or bulkheads, for the removal of ashes or offal.

The use of receptacles larger than an ordinary flour barrel is strictly prohibited.

#### B. T. WHEELER,

### Superintendent of Streets.

During the past few years the shops of the division at the South Yard had been almost entirely discontinued. These have now been reëstablished with competent mechanics upon the same basis as any journeyman shop in the city, and the repairs and some constructive work of this and other divisions has been done cheaply and well.

To the operation of these shops and the methods established there, is due in large measure the decreased expense of operating this as well as other divisions of the department. These consist of a wheelwright and blacksmith shop, paint shop, harness shop, and horse-shoeing shop, and a statement of the work performed will be found later in Appendix D.

The following table shows the number of loads of offal collected and removed in the last five (5) years, since reorganization as a division by the Street Department :

Year. 1891	(13	mon	ths)				No. of Loads. $46,742$
1892	``		•			•	46,343
1893							51,415
1894					•		50,637
1895				•	•	•	$51,\!327$

### Amount of House-offal Removed.

Each load of offal is equivalent to fifty-seven (57) cubic feet and has a maximum weight of one and one-half  $(1\frac{1}{2})$  tons tons at certain seasons of the year.

The above table does not include previous to the year 1893 the amount collected by contract in East Boston and Brighton, which amounted to about 5,100 loads per year. Of the amount (51,327 loads) collected during the year 1895, 3,732 loads were collected by the East Boston contractor, 1,419 loads were collected by the Brighton contractor, and 4,179 loads were collected by the Dorchester contractor, and 517 loads were collected by the West Roxbury contractor, leaving 41,480 loads collected by city teams.

The collection of this material is attended to in winter by an average regular force of 77 city offal carts and 169 men, and on contract work 16 offal carts and 32 men; making a total of 93 offal carts and 201 men. At different times, and especially in summer, an approximate extra force of 21 teams and 42 men are employed.

The disposal has been made during the year in the following manner: The offal from the markets, and offal that is decayed, is put on board a scow and towed to sea; the offal of Charlestown is taken to the yard at Malden bridge and there disposed of to farmers; the offal of East Boston is collected by contractors, and is removed to Revere; the offal of the City Proper and South Boston is conveyed to the vard at the South End, and disposed of to farmers, who remove it daily; the offal of Roxbury and a part of West Roxbury is conveyed to the yard on Highland street, and disposed of to farmers : a portion of the collections of West Roxbury is collected by contract and removed to Needham; the offal of Brighton is collected by contract and disposed of outside of the district; the offal in Dorchester, commencing January 21, 1895, was delivered to the New England Construction Company, at its plant on Gibson street, under a contract made July 25, 1894, for reduction and final disposition; teams which had made the collection formerly, under a contract which was rendered void upon the operation of this plant, were hired by the day, and this continued until the complaints of the residents of the locality caused the plant to be adjudged detrimental to the public health, after an examination by the Board of Health, and the process was discontinued on April 18, 1895; since that time the offal has been collected by a contractor, who in turn sells it to farmers from his own offal-sheds near Commercial Point.

YEAR.	Total amount collected.	Amount sold.	Amount dumped on scow and towed to sea or wasted.	Per cent. wasted to total collection.	Amount of re- ceipts from sales.	
1891 1	42,616 loads.	40,492 loads.	2,124 loads.	5 per cent.	\$30,672 65	
1892 ²	46,343 "	30,773 ''	15,570 "	33 ** **	21,282 82	
<b>1</b> 893 ³	46,276 "	30,824 "	15,363 ''	30 " "	20,790 03	
1894 4	42,082 "	37,057 ''	5,025 "	12 " "	26,262 40	
1895 5	41,480 "	36,620 "	4,860 "	12 " "	27,374 47	

Collection and Disposal of Offal.

123 Twelve months. Above table does not include contracts in East Boston and Brighton.

⁴ In East Boston, 3.720 loads; Brighton, 1,539 loads; Dorchester, 3,296 loads; total, 5,555 loads, — collected during 1894 are not included in above table. For 1891 and 1892, East Boston and Brighton were estimated at 5,100 loads.
 ⁵ In East Boston, 3,732 loads; Brighton, 1,419 loads; Dorchester, 4,179 loads; West Roxbury, 517 loads; total, 9,847 loads, — collected during 1895, not included in above table.

The following table shows in convenient form the full force engaged in the collection of offal alone throughout the entire eity :

CITY FORCE.	Hired	CONTRACTORS' TEAMS.						
CITY FORCE.	teams.	E. Boston.		Brighton.	Dorch'ter.	W.Roxbury.	Total.	
Sub-Foremen	2					·····	1	3

Offal Clerks	1			•••••				1
Teamsters	68	7		6	2	6	2	91
Helpers	72	7		6	2	6	2	95
Dumpers	3			•••••				3
Totals	151	14		13	5	13	5	201

The Force Employed.

The experiment in the disposal of offal which resulted in the construction of the reduction plant of the New England Construction Company, demonstrated that public opinion will not permit the establishment of such a process in a settled portion of the community. The representatives of other processes, both of reduction and incineration, claim them odorless and unobjectionable, but even if this be true in itself, their establishment must result in the concentration of the offal collection at this point. When the present methods of disposal become detrimental to the health of the community, or are made impossible by legislative enactment, the plant of the process adopted should be located upon some island in the harbor, and the collection should be made in covered cans or detachable wagon bodies, and delivered on the water front at many and widely distributed points; it could then be taken by scow to the point of final disposition without rehandling, and the most objectionable feature of garbage collection thus obviated.

#### REMOVAL OF ASHES AND HOUSE-DIRT.

The removal of ashes, house and store dirt has been attended to during the year by a minimum force of 223 men and 93 city carts, also by 6 carts with an East Boston contractor, 5 carts with a South Boston contractor, 10 carts with a Dorchester contractor, and 3 carts with a West Roxbury contractor. At different times, and especially during the winter months, an additional force of 37 teams and 74 men are employed.

This work shows a constant increase from year to year, as will be seen in the following table, and is an indication of the actual growth of the city :

AMOUNT OF ASHES, HOUSE AND STORE DIRT REMOVED. No. of Loads. Year. 313,464 1891 (13 months) . 1892303,878 1893320,571 1894326,798 . . 1895336,886

Each load of ashes contains about 40 cubic feet.

The following table shows in convenient form the force engaged in this collection throughout the entire city :

The	Force	Empl	oyed.

### STREET DEPARTMENT.

*Final Disposition* of all material collected from February 1, 1894, to February 1, 1895, together with the portion of street-sweepings and cesspool-dirt, disposed of for other division by the Sanitary Division is shown in the following table :

	Amount collected.	Deposited on low lands.	Towed to sea.	Collected by con- tractors.	Sold to farmers.
	Loads.	Loads.	Loads.	Loads.	Loads.
Ashes, house and store dirt .	336,886	180,347	103,501	53,038	
House-offal	51,327		4,860	19,847	36,620
Steeet-sweepings	34,468		34,468		
Cesspool dirt	1,758		1,758		
	424,439	180,347	144,587	62,885	36,620

¹ This amount is included in the amount collected, 51,327; of the 9,847 loads, 3,732 were collected in East Boston, 1,419 in Brighton, 4,197 in Dorchester, and 517 in West Roxbury.

# The total expenditures of the division, including

Less amount so repaid	32,340 36
Cash paid and bills rendered to City Collector,	
Net cost of maintenance of Sanitary Division, February 1, 1895, to January 31, 1896 .	\$389,792 99

Details of expenditures, income, and operation will be found in Appendix D.

#### Comparative Table Showing Net Cost of Maintenance of the Sanitary Division to the City of Boston.

	Expended.	Income.	Net cost to City
$1891 (13 \text{ months})^1 \dots$	\$509,342 24	\$45,485 29	\$463,856 95
1892	469,370 74	$36,426\ 16$	432,944 58
1893		32,056 27	449,244 36
1894		42,320 55	425,638 47
1895	432,778 52	42,985 53	389,792 99

¹ Including street-cleaning from January 1, 1891, to May 1, 1891, four months before the Street Cleaning Division was independently established.

121

# SEWER DIVISION.

The maintenance force of this division is engaged in the operation and repair of the Main Drainage Works, at Old Harbor Point and Moon Island, as well as the repair and care of the entire sewer system of the city, including the flushing and cleaning of sewers and catch-basins.

The following table shows the amounts expended from the maintenance appropriation of the Sewer Division for the past five (5) years:

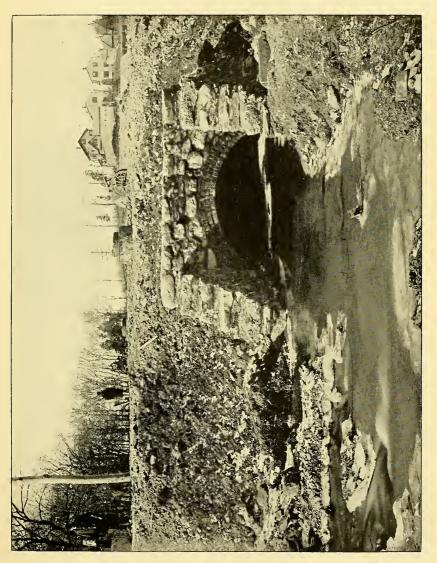

1891	(13 m)	onths)			\$446,222	69
1892	` .	•			560,608	19
1893					373,517	38
1894					304,133	40
1895				•	280,596	07

The past year has been one of such unusual activity that the amount of sewer construction in 1894, previously the largest in the history of the division, has been exceeded in the number of lineal feet of sewer built by over fifty per cent. (50%).

The city has built with its own labor and by contract 139,200.09 linear feet of sewers, and designed and inspected 36,287.35 linear feet for private parties building under release; making a total for the year of 175,487.44 feet, or over thirty-three miles. The total mileage of sewers now built is 416.45, of which 22.93 miles are intercepting sewers. Many new catch-basins and culverts have been built and old ones repaired. Over sixteen miles of sewers have been cleaned and flushed, and 18,264.25 cubic yards of sludge removed from various catch-basins.

All sewers, with four exceptions, when the law under which they were constructed permitted, have been built by department day labor; the sewers in all streets laid out under Chap. 323 of 1891, and Acts amending and referring thereto, including "The Boulevards," have been built by contract, as well as all surface drains, catch-basins, and house connections therein, which will ever be required, carrying the latter to within the curb-line.

In addition to the  $7\frac{1}{3}$  miles of boulevard, requiring two sewers, with house connections and a surface drain with con-

CULVERT AT CANTERBURY BRANCH, STONY BROOK, -- BLUE HILL AVENUE.

Ē

-

necting catch-basins for nearly the entire distance, sewers, with house drains, or surface drains, or both, have been constructed in the following "Board of Survey" streets, so called :

Abbotsford street, Bay State road, Brighton avenue, Granby street, Greenbriar street, Geneva avenue, Harvard avenue, Josephine street, Kenmore street, Lauriat avenue, St. Alphonsus street, and Sherborn street.

#### SURFACE DRAINAGE.

The attention of the City Government and the public is again called to the subject of surface drainage and the necessity for legislation to protect natural water-courses from obliteration. It is unfortunately the fact that private interest is rapidly filling up these outlets which Nature provided for the surface drainage of the water-sheds, and considers itself injured when flooded thereby in time of storm; connecting the City of Boston in some unaccountable way with the injury, and unfairly demanding the construction of catchbasins for this flow to be connected with the public sewers.

A portion of the article on "Surface Drainage" published in the report of last year seems worthy of reproduction in an attempt to bring forcibly to public attention the necessity of immediate legislative action :

"While the sewers in the City Proper, East and South Boston, and Charlestown are, in the main, large enough to carry both the sewage and surface water, those of the outlying districts are altogether too small to take the surface water, the areas to be drained being enormously larger than in the districts first mentioned. As the sewer system has been extended, year by year, into these outlying districts, the sizes designed have been but little larger than what was necessary to serve the needs of the district at the time of building. For many reasons this policy has been unavoidable; the size of oulets limits the size of extensions, and scarcity of funds often makes it imperative to build a sewer smaller than good judgment would dictate, in order to reach some community where the public health is endangered for lack of sewerage.

"In many cases it would be not only financially impracticable but would show bad business judgment to sink large sums of money in building sewers large enough for all time, when the development of the district is uncertain or likely to be slow. The result of these various causes is, that the sewer system in Dorchester, West Roxbury, Brighton, and parts of Roxbury, while large enough in general to take care of the house sewage and the street-water during light rains, is totally inadequate to carry off the surface-water of heavy rains.

"The state of things is growing constantly worse as the city grows, because, as new streets and houses are built, the proportions of impervious service from which the rain runs off rapidly, is being increased, causing the rainfall upon any given area to be concentrated and discharged in less time than in former years.

"The inadequacy of the sewer systems to carry the stormwater becomes, therefore, more apparent every year as this change in the character of the surface of the ground goes on. It is also apparent that it becomes correspondingly important to preserve and improve the natural water-courses to serve as carriers of the bulk of these floods, as the alternative to this is practically to rebuild the whole sewer system of the suburban districts upon a larger scale.

"In other words, we shall be compelled to regard our sewers as part of a partially separate system, although they were built and have been used upon the combined principle.

"By confining the sewers to the duty of carrying the house sewerage and the discharge from a limited number of catchbasins only, they will prove in most cases large enough, while the natural water-courses, supplemented by surface drains in the streets, will have to be developed into a system for carrying away the storm-water.

"It is also important to keep as much surface-water as possible out of the sewer system, for the additional reason that all water, whether sewerage or rain water, has to be lifted by the pumps of the intercepting system.

"But however much those whose business it is to care for the city's interest may be impressed with the importance of preserving the water-courses, it is very difficult to impress the general public with its importance. This department is constantly involved in contests with land-owners who are filling up and obliterating these water-courses, heedless of well-defined channels or conspicuous street culveits. And here comes in play that discouraging phase of human nature, in consequence of which men, who are honorable in their dealings with their fellows, seem to be able to make use of a much lower code of morals when they come to deal with that impersonal entity called the city.

"Although it may be explained to them that their course will entail upon the city in a few years an enormous expense for rebuilding the sewers of larger size, and although the law is perfectly clear that no man has a right to obstruct a

natural water-course and thereby damage his neighbor, still their personal gain outweighs these theoretical considerations, and they will persist in obliterating the channel, and will bring every political and other influence to bear to the end that the water which should flow in that channel be turned into the sewer, and have in many cases succeeded.

"No one can pretend that the land speculator suffers any hardship by not being allowed to improve his lot in this manner, because the depreciation in the value of the land caused by the presence of the water-course has undoubtedly been discounted in the purchase price in every transfer through which it has passed, and certainly no one can claim that he has any moral right to the increment of value added thus at the city's expense. Unfortunately, his legal right to it is clear if he can get the thing done, and therein lies the temptation.

"Now, the city's interest is such a vital one in this matter that it cannot afford to remain passive; its course must be more aggressive in the future, or many of the most important of these water-courses will be practically obliterated within a few years, as a perusal of the paragraphs describing their present condition will prove.

"The law, as it stands, gives the city no rights which are at all commensurate with its interest in the matter.

"The city's obligation is to keep a good and sufficient culvert in operation on every water-course which crosses a public street.

"If an abutter upon a water-course starts filling it in, the city can take no action until actual damage has resulted from flooding the street.

"This is the sum total of the city's duties and rights in regard to these channels."

Following this were suggestions for new legislation, the object of which would be to keep the existing channels open, also to improve the same without the necessity of making takings, and the consequent liability for damages; and also to enable the city to assess the cost of improvements upon lands abutting upon such stream.

This last phase of the question deserves further discussion. Abutting lands are not the only lands benefited or served by an improvement of a water-course. Let us consider what are the causes which bring about the necessity of improving, that is, enlarging the capacity of a water-course. It is not only the desire to utilize, by building upon, the low lands near the brook, but it is the actual change in the nature of the surface of the entire valley or water-shed for which the brook serves as the natural drain, caused by the grading, filling of hollows, construction of streets, houses, etc., whereby the proportion of impervious surface is increased, and the surface-water discharged more quickly into the water-courses, as previously explained.

Although the total quantity of water to be provided for is not increased, the effect is the same as though there were an actual increase, because the same quantity is discharged in less time; enlargement of the discharging channels therefore becomes necessary, for the channel must be equal to the maximum demand upon it, even if that demand be of short duration, or a flood ensues.

The service which such an enlarged water-course performs, then, is to drain off the surface-water of all the land, high as well as low, which lies within its water-shed; indeed the changes just described usually take place first upon the high lands, which are naturally occupied and developed before the low lands. It is evident, therefore, that the cost of enlargement should be assessed upon all the lands within the water-shed of that portion of the brook which is enlarged, and, in equity, the assessment should be confined to such lands as the city, outside of such water-shed, is not benefited or served in any way by the improvement. But the low lands, which have always been liable to be flooded, receive a benefit in addition to the service which the brook renders them in common with all the land of its water-shed, --- they become habitable; whereas before the enlargement, which means deepening and lowering, of the brook they were not. Hence, a larger proportion of the cost of improvement should be assessed upon them than upon the high lands.

The difference in the valuation of the low lands, as shown by the assessors' books, in the year following the completion of the improvement, as compared with the valuation in the year before the improvement was begun, might fairly be considered as measuring the benefit received by them, and an assessment to defray the cost of the improvement might be made to equal this amount, the remainder of the cost of improvement, if any, being assessed equally upon all the lands within the water-shed, including the low lands; in the case of the latter, the last described increment of assessment (representing service) being added to the first described increment (representing benefit received), and constituting the total assessment upon the low lands; that upon the high lands being the increment which represents service only.

Details of expenditure, income, and operation of the Sewer Division will be found in Appendix E.

#### STREET-CLEANING DIVISION.

The Street-Cleaning Division has charge of the cleanliness of the public ways in the central portion of the city in which there are paved streets; namely, in seven districts, while the suburban districts — No. 4, Brighton; No. 5, West Roxbury, and No. 6, Dorchester — are cared for by the Paving Division.

The following table shows the amounts expended for the maintenance of the Street Cleaning Division for the past five (5) years:

1891	(9	mont	$hs)^{1}$	•		\$215,929	33
1892			•			288,320	42
1893						308,707	30
1894						301,477	44
1895		•	•			$305,\!998$	50

#### STREET-CLEANING.

With an expenditure of \$305,998.50, this division has cleaned 11,418.99 miles of streets, removing 122,544 loads of street-dirt; has also cleaned 2,718.45 miles of paved gutters on macadamized streets, including special work on crossings, maintained 16 dumping-stations, removed excess of snow from pavements and crossings, paid special attention to the collection and removal of leaves in the fall of the year, maintained a paper-patrol in freezing weather and a push-cart patrol in the retail district, which has been extended during the year into the business section of Roxbury; and, besides making necessary repairs to its plant and purchasing the new stock needed, made a disposal at sea of 31,278 loads of street-dirt. The average cost of sweeping streets, including supervision, labor, yard, and stable expenses, pro rata of dumps, and removal, was, by improved organization and supervision, reduced from \$15.61 (the cost last year) to \$14.44 per actual mile of street swept, during the last eight and one-half months of the year. In the care of the three suburban districts, the Paving Division removed from macadamized streets, 22,636 single and 2,107 double loads of street-scrapings. After a severe snow-storm, the

¹Duties performed by Sanitary Division and cost charged to its appropriation previous to May 1, 1891.

Paving Division force is called to the aid of the Street-Cleaning force, and the cost of snow removal by it is reported in Appendix C. The cost of snow removal by the Street-Cleaning Division will be found in Appendix F.

The following table shows the number of loads of streetsweepings removed each year during the last five years :

Year. 1891, (	(13	month	s) ¹				No. of Loads. 91,425
1892	`		<i>,</i>			·	106,829
1893	•	•	•	•	•	•	· · · · · · · · · · · · · · · · · · ·
	•	•	•	•	•	•	110,496
1894	·	•	•	•	•	•	95,478
$1895 \ ^{2}$	•	•	•	•	•	•	122,544

The following shows the average force employed during the year on the New District basis:

District.							Average empl	No. men oyed.
Office, including	Dep	uty-S	uperii	ntende	ent			4
1, South Boston	•	•	•					34
2, East Boston	?							26
3, Charlestown	\$	•	•	•	•	•	•	20
7, Roxbury								34
8, South End			• •					78
9, Back Bay								20
10, West End and	1  Ne	orth E	nd					66
Yard and stable								12
Push cart patrol								42
Total .								316

The above-mentioned force use in carrying out the work of the division the following plant:

19 double-sweeping machines, 21 single-sweeping ma-chines, 12 water-carts, 79 street-carts, 93 horses (owned by the division), 20 asphalt-scrapers.

Six of the above horses are driving-horses.

The push-cart patrol use :

Sixty-one push-carts, 82 extra barrels, 3 street-carts, 3 horses (all hired). Of the 61 push-carts, 37 are in daily service.

In addition to the above-mentioned carts, the division hires about 43 extra teams.

During the summer an extra single team and helper were hired, to empty the public waste-barrels located throughout the city.

¹ Including removal by the Sanitary Division four months previous to May 1, 1891. ² Includes waste-paper, 1,821 loads. Push-cart system, 5,386 loads.

The department owns three 3-horse sweeping-machines, which are stored in the yard of the Lockwood Man'f'g Company at East Boston. These were purchased in 1894, and were not found to operate successfully; they are designed for self-loaders, but are of no use to the department.

Special efforts have been made during the year for the abatement of the "paper nuisance" and kindred causes of unsightliness, due to the carelessness of abutters and the travelling public.

The following circular has been issued and given wide distribution:

#### CITY OF BOSTON.

#### STREET DEPARTMENT.

#### Notice to Occupants.

Your attention is hereby called to the following sections of the Revised Ordinances in relation to

#### Throwing or Sweeping Dirt of any kind into the Public Streets.

#### CHAPTER 43.

SECT. 38. No person shall, except in accordance with the permission of the Superintendent of Streets, or in accordance with the provisions of Section 42 of this Chapter (providing for the sanding of sidewalks), sprinkle, scatter, put, or place, any earth, dirt, gravel, sand, cinders, ashes, sawdust, salt, or mixture of salt, in or upon a street, not nor shall any person, except in accordance with the permission of the Superintendent of Streets, remove any manure or dirt from any street. SECT. 39. No person shall throw, or sweep into, or place or drop

SECT. 39. No person shall throw, or sweep into, or place or drop and suffer to remain in any street, any piece of hoop, board, wood, wire, paper, or any nails, sweepings, sawdust, soot, ashes, einders, shavings, hair, manure, oyster shell, clam shell, lobster shell, card, hand-bill, or rubbish or filth of any kind, or any noxious or refuse liquid or solid matter or substance.

SECT. 103. Whoever violates any provision of this Chapter, shall be punished by a fine not exceeding twenty dollars for each offence, and not only the person actually doing the prohibited thing, but also his employer and every other person concerned in so doing, shall be punished by the said fine.

Sweeping store dirt to the sidewalks, and thence to the gutters, is in violation of the above ordinances. You are therefore notified to provide other measures for the removal of all sweepings and litter, as the above ordinances will be enforced.

#### B. T. WHEELER,

Superintendent of Streets.

If the existing ordinances regulating the conduct of the public with respect to cleanliness were faithfully observed and duly enforced, the task of the Street-Cleaning Division would be greatly lightened. With streets swept every night and patrolled during the day, no condition of cleanliness can be preserved when the operations of the department are followed by a procession of the thoughtless, the indifferent, and the ignorant, casting from them into the street refuse of fruit, torn scraps of letters, destroyed after perusal, the daily papers, and everything which ceases to have a use, while they are conveniently near a public way.

The number of public waste-barrels has been largely increased during the year, and the tendency of fruit dealers and others selling goods, under a permit from this department, to throw refuse into the streets has been largely checked by the issuance of the following letter, and if compliance therewith has been refused the permit to sell has been revoked:

#### CITY OF BOSTON.

#### STREET DEPARTMENT.

Boston,_____189

DEAR SIR: Complaint having been made of the condition in which the street is kept in front of your premises, where you are doing business under a permit obtained from the Street Department, you are hereby notified that it will be necessary for you to procure a waste barrel, to be located in the immediate vicinity of your stand. In order that these barrels may be of uniform dimensions, color, and lettering, you will be obliged to purchase the same of the city of Boston. Application for one of these barrels must be made to the Deputy Superintendent of the Street-Cleaning Division, at his office at 14 Beacon street, within ten days from date.

Yours truly,

B. T. WHEELER,

Superintendent of Streets.

Details of expenditure, income, and operation will be found in Appendix F.

#### Comparative Table Showing Net Cost of the Maintenance of the Street-Cleaning Division to the City of Boston.

Expenditu	res.	Income.	Net Cost.
1891 (9 months). \$215,929	33 §	\$941 00	\$214,988 33
1892 288,320	42 8	,256 37	280,064 05
1893 308,707	30 6	5,049 82	302,657 48
1894 301,477	44 8	,163 77	293,313 67
1895 305,998	50 6	,465 26	299,533 $24$

#### STREET-WATERING DIVISION.

This division was made a separate and distinct part of the Street Department, with a Deputy Superintendent in charge, March 6, 1895. Heretofore the street-watering has been conducted by the Paving Division, with a foreman in charge. That the change fixes responsibility and increases efficiency, the service rendered by the division during the year and the reduced expense will prove clearly.

The following sums have been expended for street-watering during the past five (5) years :

1891	• *	•	•	\$104,263 62
1882				94,507 $80$
1893				99,430 16
1884				87,169 08
1895				76,424 70

In the past it was deemed proper that the watering in the Back Bay and the South End should be done by contract rather than day work. This method at best is unsatisfactory, as the division and the contractor would often be of counter opinions as to when the carts are needed, and the supervising force compelled to be constantly on the alert to provide for the conditions before their tardy appearance. A contract, in street-watering at least, no matter what rebates it contains for poor service, does not give the satisfaction that day work does. For this reason, after due consideration, day work was substituted for contract work in the Back Bay and the South End districts, with the gratifying result that the watering was better done in those localities and at an astonishingly smaller expense than formerly. The cost of watering the Back Bay under contract in 1894 was \$6,696.02; this year under day work the expense was \$4,990. The cost of watering the South End under contract in 1894 was \$5,128.50, against \$2,540 for day work this year. A saving in both districts of \$4,294.52 in day work over contract.

This saving in the South End is, of course, partly due to the discontinuance of the use of salt-water furnished by the contractor.

The past season was not excessively hot nor yet particularly wet. The greatest advantage was taken of the rainfall. Complaints made of the work of the division are of two kinds, one from the householder, who considers the flooding of the street from curb to curb only sufficient for his taste; the other, from drivers and cyclists who appreciate proper and intelligent street-watering to be the laying of the dust without soaking the street into mud.

Unusual attention has been given to the prevention of this flooding of macadam streets, a custom heretofore prevailing to the utter ruin of the street, but to the advantage of the water-cart owner since it permitted him to make fewer trips over his route, without complaint from the abutters because of dust; and it has been the constant aim of the division to acquire that happy medium so difficult to attain, which will give protection from dust to the abutters, and freedom from mud to the cyclist, meanwhile saving the city the thousands of dollars in the cost of maintenance which improper watering of its macadamized streets has always cost it.

Better results were made possible by more complete supervision, and to increase the efficiency of the inspecting force, its members were provided with bicycles. The effect of this improved organization has been to give much better watering in the districts where in the past negligence in watering was due to the large territory assigned to the inspectors, averaging over twenty-five miles each, and which it was impossible for them to cover twice a day as is now done with the aid of the bicycles. The utter absence of any grave street-watering complaint, the work of the year having been subject to the smallest number of complaints of any kind ever known, is unquestionably a remarkable testimonial to the efficiency attained by the division. It has been brought about with the assistance of the bicycle, and the excellent telephone system arranged with the inspectors whereby they are in communication with the Deputy Superintendent morning and noon.

There is still a false impression in some sections that the division waters paved streets, whereas the watering is done as formerly by the subscriptions of the abutters; this is because of the extra original cost of paved streets over macadam, and the further fact that it is possible to keep them clean by sweeping. Corporations are compelled to water after finishing their operations in paved streets. The division is always willing to assist the abutters in having any nuisance abated, and invariably the contractors are ready to meet the extra demand upon them in the matter of operations in paved streets.

The use of salt-water on macadam streets is impracticable

save in a very few locations, and is an undoubted injury to the better class of vehicles, and it has therefore been entirely discontinued.

Comparative Table Showing Net Cost of Maintenance of the Street-Watering Division to the City of Boston.

	Expenditure.	Income.	Net Cost.

#### INCOME.

The amount of bills deposited with the City Collector during the year was as follows :

Work done b	y thi	is divi	sion				\$	\$127	67
Damage caus						•		76	30
Rent for loca	tion	of ca	ble-h	ouses			•	200	00
Rent of land	and	build	ings	• .	•	•	•	$1,\!350$	00
Total								\$1,753	97

A detailed statement of expenditures, and description of work performed follows, also a list of those bridges supported wholly or in part by the City of Boston; statement of the public landingplaces, etc.; width of draw openings; widths of bridges, roadway and sidewalks; kind of pavement used; number of draw openings made for navigation, and a census of traffic taken on some of the most important bridges.

#### TIDE-WATER BRIDGES.

Broadway bridge (over Fort Point Channel.)

Sheathed roadway of Foundry-street span and boxed in around girders. Sheathed roadway from Foundry street to the draw, also patched deck. Patched deck and sheathing on the draw several times, put in new oak headers, repaired latches and iron fence, and built new sand-box. Sheathed roadway and patched deck from the draw to Lehigh street. Sheathed roadway on Lehighstreet span, boxed in around girders, put in new deck on northerly sidewalk and new concrete walk on same. Repaired piers, waterways, engines, gas-pipes, water-pipes, pump, etc. Erected cinder and smoke fenders on span over the New York. New Haven, and Hartford railroad. Painted entire length of bridge on top two coats, inside of draw and engine-house two coats, and outside of tool-house two coats.

Draw-Tenders' Reports. - Concluded.

a,

It will be noted that the largest outlay for maintenance was upon the Boylston-street bridge, over the Boston & Albany R.R., for cleaning and red-leading all the ironwork, and redecking and sheathing the same. This was done upon the recommendation of the City Engineer, and cost for labor and material, \$2,805.55.

All of the bridges requiring it have been painted during the year, and all of the draw-houses have had all sanitary necessities put in complete good order. Water has been connected at Lstreet bridge, and the water connections have been made more complete at Congress street, which will result in a considerable saving for water formerly bought of water-boats. The men's quarters at draw-houses have been renovated and repainted. The carpenters have done a great deal of work and done it well, the roadways on all the bridges being in excellent condition.

The names of each of the principal bridges have been painted and set up in conspicuous places on them.

Work upon the inland bridges, in addition to repairs, includes keeping them clean. They have been swept regularly and thoroughly, and in winter kept clear of snow.

# APPENDIX B.

## REPORT OF DEPUTY SUPERINTENDENT OF FERRY DIVISION.

NORTH FERRY, EAST BOSTON, February 1, 1896. Mr. B. T. WHEELER, Superintendent of Streets:

DEAR SIR: I respectfully submit the annual report of the expenditures, income, and operations of the Ferry Division of the Street Department for the financial year ending January 31, 1896.

Respectfully yours,

THOMAS KELLOUGH, Deputy Superintendent.

The Ferry Department ceased to exist by legislative enactment, July 1, 1895, but after that date its appropriation, property, and obligations were assumed by the Street Department, and it has been operated as the Ferry Division of that department. No report having been made, however, for the five months of its operation as the Ferry Department, the financial statement and report which follows are for the entire twelve months, since its last report:

PLANT AND PROPERTY IN CHARGE OF THE FERRY DIVISION.

South Ferry, East Boston side, located at the terminal of Lewis street, covers an area of 68,725 square feet of land and water. On these premises there is one head-house, one coal-shed, one work-shop for carpenters, machinists, and blacksmith, one gateroom and oil-room, three piers, which form the two ferry slips, two drops and tanks, and one dock, where boats are laid when not in use or while undergoing repairs.

South Ferry, city side, located at the terminal of Eastern avenue, covers an area of 28,135 square feet, upon which is erected one head-house, with canopies extending over driveways, also boiler-room and gate-room, three piers, which form the two slips, and two drops and tanks.

North Ferry, city side, located at the terminal of Battery street, covers an area of 45,000 square feet of land and water, upon which is erected one head-house, with canopies, boiler-room, gateroom, store-shed, etc., three piers, which form the two slips, and two drops and tanks.

North Ferry, East Boston side, located at the terminal of Border street, covers and area of 62,138 square feet of land and water, upon which is erected one head-honse, with canopy, boiler-room, gate-room, oil-room, stable and coal-shed, three piers, which form two slips, two drops and tanks.

The wharf property adjoining the head house on Eastern avenue was leased several years ago by the Ferry Department for \$4,000 per year. The whole premises are now sublet to the Institutions Department for \$2,000 per year.

Of the drops there are eight — two of them are new, one having been built in 1894 and the other in 1895.

Of the other six, four of them are in good condition, two are not so good.

The South drop on North ferry, Boston side, is poor, but perfectly safe.

The North drop on South ferry, Boston side, is in the same condition.

All the piers, twelve in number, are now in fair condition.

The North pier on South ferry, Boston side, has just been repaired at a cost of over \$1,300.

The several head-houses and buildings are in good condition, except the head-house and the coal-shed at the South ferry, East Boston side, which must soon be replaced by new ones.

The head-house on South ferry, Boston side, should be moved over to one side same as at North ferry, thereby making it safe and more convenient to foot-travel and greatly facilitating team traffic.

Battery street should be widened on westerly side between Commercial street and ferry gate. This has been agitated for a long time without success, but should be done.

With the coöperation of the Board of Police, patrol-boxes have been placed at each of the head-houses, and better protection thus secured to person and property of the patrons of the ferries.

# APPENDIX C.

## REPORT OF DEPUTY SUPERINTENDENT OF PAVING DIVISION.

ROOM 44, CITY HALL, BOSTON, February 1, 1896.

MR. B. T. WHEELER, Superintendent of Streets:

DEAR SIR: I respectfully submit my annual report of the expenditures and income of the Paving Division of the Street Department for the financial year ending January 31, 1896, showing the nature of the work, the number and variety of permits issued, and the details of expenditures involved in paving, macadamizing, and regulating the various streets.

Respectfully yours,

D. N. PAYSON,

Deputy Superintendent.

The following shows the total yearly expenditures of the Paving Division, according to the report of the Superintendent of Streets, for the last five (5) years :

1891	(13)	months)				\$1,991,524 28
1892		•				1,972,857 88

### PROPERTY IN CHARGE OF THE DEPUTY SUPER-INTENDENT OF PAVING DIVISION.

Buildings and wharf on Albany street, opposite Sharon street. The building is of brick and wood, and covers some 8,000 square feet of land, and is divided into a shed for storage, blacksmith's and carpenter's shops, tool-room, and stable. The total contents of the lot, including wharf and building, are 63,180 square feet.

Fort-hill Wharf, containing 21,054 square feet, placed in charge of the Paving Department May 18, 1874, to be used for the landing and storage of paving-blocks and gravel until such time as said wharf shall be wanted for the extension of Oliver street. The greater part of said wharf is occupied by the Sanitary Division as a garbage-dump, and the building thereon is leased to a tenant.

Lot on Chelsea, Marion, and Paris streets, East Boston, containing 43,550 square feet. Part of this lot used by the Sewer Division.

Ledge lot on Washington street, corner Dimock street, Roxbury, containing 134,671 square feet. Upon this lot are buildings containing a steam-engine and stone-crusher.

Highland-street Stable lot. Upon this lot is a large brick stable, erected in 1873, and occupied by the Sanitary and Paving

287

So Vda

Divisions; also a brick building used as a blacksmith's shop, and a shed for the storage of tools, etc.

Ledge lot on Codman street, Dorchester, containing 299,000 square feet, was purchased in 1870. Upon this lot is a shed containing a steam-engine and stone-crusher; also a stable and toolhouse.

On the Almshouse lot, Hancock street, Dorchester, there are two stables; also a shed and tool-house.

Ledge lot on Magnolia street and Bird place, Dorchester, containing 81,068 square feet. This lot was purchased by the town of Dorchester in 1867.

Downer-avenue lot, Dorchester, containing 35,300 square feet.

On Child street, West Roxbury, a lot of land containing 43,024 square feet, upon which are a stable and shed, blacksmith's shop, and tool-house.

Gravel lot in the town of Milton, on Brush Hill road, containing 64,523 square feet, hired by the town of Dorchester for nine hundred and ninety-nine years.

Gravel lot on Morton street, Ward 23, containing about onethird of an acre, purchased by the town of West Roxbury in 1870, used for storage purposes.

Ledge and gravel lot, rear of Union street, containing about 37,000 square feet, purchased by the town of Brighton. This lot is at present leased.

Ledge lot on Chestnut Hill avenue, Brighton, containing about thirteen acres, upon which are an office, engine-house, stable, and crusher plant.

On Medford street, Charlestown, a wharf lot, foot of Elm street, containing 8,000 feet, upon which are sheds, office, stable, etc.

In South Boston, corner of H and Ninth streets, stable, carriage-house, shed, tool-house, and office on leased land.

On Hereford street, a yard with shed, tool-house, and office.

Wharf, known as Atkin's wharf, 521 Commercial street, purchased in 1887 for \$24,000, containing 22,553 square feet, having on it an office and stable.

On Kenney street, Roxbury, buildings containing engines, stone-crushers, tools, etc., on leased land.

Property belonging to the Paving Division, consisting of 91 horses, 71 carts, 15 water-carts, 16 wagons, 5 steam-rollers, 7 stone-crushers, and 7 engines.

In connection with the above, the Barber Asphalt Company has received 34 permits on which they have repaired asphalt paying to the amount of 1,513.50 square yards.

There have also been 106 Emergency Permits granted, on which, according to the returns made to this office, 5,094 openings have been made, of an average of about six feet each.

Permits other than for opening streets, have been issued as follows:

There have been 13,334 notices sent to the various foremen directing them to repair defects in the streets, which have been reported by the police, or from other sources; also 2,424 notices to private parties to repair work which had been improperly done by them where they had received permits to open the streets, and to owners of estates where there were defective coal-holes or Hyatt lights.

In accordance with Sect. 8, Chap. 36, Revised Ordinances of 1892, 328 notices have been sent to the foremen of the several districts, directing them to make, if necessary, repairs where parties making openings had neglected to attend to them within a specified time after being notified to do so.

Three hundred and nine notices have been sent to departments, and others, regarding proposed street improvements.

There have been 544 new bonds filed; also 316 applications referred to the Police Department, asking for information regarding locations where permits had been asked for to sell fruit, etc., from windows, bulkheads, and areas, and the granting or refusal has been governed by the recommendations received. The same course has been pursued in cases of individuals desiring to occupy sidewalks for more than ten minutes at a time to load or unload goods.

The inspectors connected with the Paving Division have reported to this office at an appointed hour daily, and presented in writing a statement of their doings of the previous day, all of which have been examined, and such notices or correspondence as becomes necessary by reason of their reports, forwarded. During the open season there have been a number of extra inspectors employed to

292

watch over the work of companies opening long trenches. Their reports were also made in writing daily, giving the number of feet opened, amount of pipe or conduit laid, also the amount of backfilling, material used, and quality of the work in refilling and resurfacing, thus giving an idea of the condition of the streets at the points of opening.

These inspectors were paid by the companies to whose work they were assigned.

Since the removal of this office, on April 15, from Room No. 7. Old Court-House to the present quarters, Old Probate Building, No. 28 Court square, where, for the first time there is sufficient accommodation for the work of the office, all plans of street-railway tracks, poles, etc., and underground pipes or conduits have been removed from the office of the Paving Division to this office, and together with all other plans showing locations of electric poles, underground conduits, etc., are now being arranged and indexed. No plan is now loaned to any department or person without a receipt being taken for the same.

Early in March a new duty was assigned to this office, in the examination of conditions of streets and sidewalks at points where it had been claimed that accidents had happened, and from statements received from the Inspector of Claims for the city, it seems to have been of much value. The following is the summary of this work during the season:

The number of claims filed against the department since March 12 is 100.

The general character of these claims is found upon inspection to be based on various alleged defects. When, received at this office the claim is carefully investigated by the examiner, the place measured, and a sketch made of the location, report is made to the Superintendent of Streets, and is filed in his office for reference; to be used also for the benefit of the committee on claims, and as evidence in court if necessary, and a duplicate report is also kept in the Permit Office.

A great many of these claims are in reality for no defects in the highway, but are traced to the negligence of corporations, contractors, builders, drain-layers, etc., who fail to properly light or guard their trenches or obstructions, and who do not put the street back in a workmanlike or satisfactory manner, therefore a new feature has been added to fit these cases in the form of a notice which is sent to the parties who have or had permits for openings, obstructions, etc. As will be readily seen, they place the responsibility for these accidents and defects on the proper parties. It is also a matter of importance to know that these notices greatly aid the Inspector of Claims in the settlement of a number of such cases.

## APPENDIX D.

### REPORT OF THE DEPUTY SUPERINTENDENT OF THE SANITARY DIVISION.

12 BEACON STREET, BOSTON, February 1, 1896.

MR. B. T. WHEELER, Superintendent of Streets:

DEAR SIR: I respectfully submit my annual report of the expenditures, income, and operation of the Sanitary Division of the Street Department for the financial year ending January 31, 1896.

Respectfully yours,

C. A. YOUNG, Deputy Superintendent.

#### Capacity of Offal-Wagons.

During the fall of 1892, 24 offal-wagons were measured and contents weighed for the purpose of obtaining the capacity of wagons and the weight of offal per cart-load. Their capacity averaged,  $3^{\pm3}_{04}$  cord feet, or 56.25 cu. ft., and the weight averaged 3,115 lbs. A cord equals 128 cu. ft., or 7,091 lbs. Price per cord for offal, same as 1892. South Yard, \$4.00; Highland Yard, \$5.00; Charlestown Yard, \$4.00.

¹ Paid Sewer Division towards maintenance of boats.

#### ORGANIZATION.

- 1 Deputy Superintendent.
- 4 clerks.
- 5 foremen.
- 1 captain of scows.
- 6 sub-foremen.
- 13 inspectors.
- 19 mechanics.
- 2 tallymen or aids.

3 watchmen.

- 5 feeders.
- 5 messengers.
- 6 stablemen.
- 10 yardmen.
- 24 dumpers.
- 189 ash-cart drivers and helpers. 140 offal-cart drivers and helpers.

Total, 433 employees.

#### HOUSE-OFFAL.

There are employed in the removal of house-offal 201 men and 93 wagons. The offal is removed from dwelling-houses twice a week during the summer months, and once a week during the winter; from hotels, markets, and restaurants it is removed daily.

The men are required to enter the yards, collect the offal, empty into wagons, and deliver at the depots, located as follows: one on Albany street, one on Highland street, Roxbury; and one at the Almshouse, Charlestown; also to the dumping-boats located at Fort Hill wharf, on Atlantic avenue.

The offal is largely sold to farmers of adjoining towns, the remainder is dnmped on the scows and carried to sea. About nine per cent. of the quantity collected during the past year has been disposed of in this manner.

On January 21, 1895, the New England Construction Company commenced the disposition of the offal collected under the McShane contract at the plant erected by them on the city land located on Gibson street, Dorchester. They disposed of 910½ tons under their patented process, for which they received \$569.44; but the residents of Dorchester objected to the process and location of the plant, and held public indignation meetings, appealing to the Board of Health to stop the running of the plant, and finally applied to the Courts for an injunction; this was granted, and on April 18, 1895, it was closed, and still remains so.

The Dorchester contractor disposes of the offal at present in the same manner as the city itself, by sale to farmers.

At present there are four sections of the city let out by contract for the collection of house-offal: East Boston, by Thomas Mulligan; Dorchester District, by John McShane; Brighton District, by D. B. Morrill; and a portion of West Roxbury, by George T. Barnes.

The cash revenue received from the sale of house-offal for the past five years has been as follows :

1891					\$30,246 65
1892					21,282 82
1893					20,790 03
1894					26,262 40
1895					27,374 47

The money received from the sales of house-offal is deposited monthly with the City Collector, and then credited to the Sinking-Fund of the City of Boston.

#### HOUSE-DIRT AND ASHES.

In the collection of house-dirt and ashes there are employed 271 men and 199 carts. This material is removed from hotels, tenement-houses, and stores daily; from dwelling-houses once a week. The City Ordinances of 1892 (Chapter 36) require that house-dirt and ashes shall be kept in an easily accessible place for their removal, the men being obliged to enter the yards and remove the receptacles to the sidewalks, where their contents are dumped into the carts. The receptacles are then placed in their original position. The material is disposed of, if possible, on low lands, being used for filling, and is also dumped on scows. to be carried to sea. Of the amount collected last year, thirty-one per cent. was disposed of in this manner, viz., carried to sea.

There are five sections of the city let out by contract for the collection of house-dirt and ashes. Both Dorchester contracts are held by John McShane; South Boston, west of Dorchester street, by Denis O'Sullivan; East Boston by Wm. F. Hedrington; and a part of West Roxbury by Matthew E. Nawn.

At the expiration of one of the South Boston contracts — that one held by F. J. Mohan, — east of Dorchester street, on May 1, 1895, the work was continued by day labor, with teams from the South yard. Later in the year, a stable and yard were hired on Ninth street, corner of Vale, and all of the teams for the collection of ashes in this section were located there, together with the offal wagons that were working in South Boston, in order that the work of collecting and removing both house-dirt and ashes and houseoffal might be done by day labor.

#### DIVISION REPAIR-SHOPS.

Located at the South End Yard, situated 650 Albany Street.

At these shops all of the repairs on carriages, carts, wagons, etc., are made, together with the painting of same; all harnesses are repaired and many made, and a portion of the horse-shoeing done.

The mechanics in these shops are 'engaged also in making repairs on the vehicles, etc., sent by the different divisions of the Street Department; all street-signs are painted for the Paving Division, and a certain amount of horseshoeing is done for the several divisions.

#### Wheelwright and Blacksmith Shops.

Cost to maintain during the past year, the sum of \$10,005.23, of which amount \$5,206.25 was expended for labor and \$4,798.98for stock. The carts, wagons, and other vehicles of the division were properly overhauled, when in need of repairs, and the entirelot of ash and offal sleds were put in proper working order. Of the above amount expended in maintaining these shops, the following amounts were charged off to the several divisions and others for repairing, altering, and putting in good condition their carts, wagons, watering-carts, buggies, sleds, etc.:

Paving Division .			\$1,036 65
Sewer Division			1,247 12
Street-Cleaning Division			879 46
Bridge Division .			204 68
Street-Watering Division			217 94
Central Office			$55 \ 93$
County of Suffolk .			4 80
			\$3,646 58

This leaves a net cost of \$6,358.65 for the repairs and construction of all work of this character for the Sanitary Division.

There are employed in these shops 2 wheelwrights, 2 blacksmiths, and 3 helpers.

#### Paint-Shop.

Cost to maintain \$4,678.66, of which amount \$3,649.88 was expended on labor and \$1,028.78 on stock. The work done by this shop was the painting and lettering of that which was either built or repaired in the wheelwright and blacksmith shops, together with 762 different styled signs that were painted for the Paving Division. Of the above amount expended for maintaining this shop, the following amounts were paid by the several divisions of the departments for painting carts, wagons, buggies, signs, etc.:

Paving Division				\$1,546 08
Sewer Division				460 67
Street-Cleaning Division				418 55
Bridge Division				$102\ 23$
Street-Watering Division	•			$117 \ 50$
Central Office			•	$4 \ 07$
				\$2,649 10

Leaving the balance, \$2,029.56, as the cost of this work for the Sanitary Division.

This shop employs 4 painters and 1 helper.

#### Harness-Shop.

Cost to maintain, \$4,140.68, of which amount \$2,385.93 was expended for labor and \$1,754.75 on stock; part of the work sent to the blacksmith and wheelwright shops was always repaired here, such as Goddard and Concord buggies, leather seats to wagons, etc., together with all the new pieces of harness made for the several divisions. The entire lot of old and new harness owned by the Sanitary Division has during the year been overhauled, repaired, and oiled at this shop. Of the above amount paid out for maintaining this shop, the amounts charged to the several divisions of the department for work done were as follows:

Paving Division .						\$167 17
Sewer Division .						$234 \ 75$
Street-Cleaning Division		•	•	•		444 11
Bridge Division .	•	•	•	•	•	$41 \ 09$
Street-Watering .	•	•	•	•	•	10 56
						\$897 68

Leaving balance, \$3,243, as the net cost of work done for the Sanitary Division.

This shop employs 4 harness-makers and helpers.

#### Horse-shoeing Shop.

Cost to maintain during the past year \$4,352.38, of which amount \$2,854.82 was expended for labor, and \$1,028.78 for stock. All of the horses at the South Yard, together with the Street-Cleaning Division horses stabled there, as also some of the horses located in the different stables of this division, and of other divisions of this department, are shod at this shop and for which the several divisions were charged the following amounts:

Paving Division				\$369 00
Sewer Division				327 75
Street-Cleaning	Division			2,428 75
0				
				\$3,124 50

Leaving balance of \$1,227.88 as cost to the Sanitary Division, for this class of work.

This shop employs 4 horseshoers and helpers.

Following are tables showing the nature of work that was performed by the mechanics in the different shops of this division for the several divisions of the Street Department : CITY DOCUMENT No. 29.

# CITY DOCUMENT NO. 29.

## PLANT AND PROPERTY IN CHARGE OF SANITARY DIVISION.

#### South City Stables, Shops, and Sheds.

Situated on Albany street, opposite Newton street. The lot belonged to the city before being used for this purpose, and contains 90,780 feet. The stable and buildings connected therewith are brick. There are also on the premises five wooden sheds, used for storing wagons, etc. The stable is two stories high, with French roof, and has accommodations for 100 horses. Twentythree horses are kept in sheds. Total original cost, exclusive of land, \$79,089.23.

Connected with stables are blacksmith, wheelwright, painters, and harness-makers' shops, in which the wagons, carts, harnesses, etc., used by the department are constructed and kept in repair.

#### Offal Depot.

Erected in 1864, on the wharf fronting on Albany street, opposite Brookline street, on the other side of the dock from that used by the Paving Division. The lot which the building occupied, and the yard attached to the same, contains 39,511 feet, and belonged to the city before being used for this purpose. Total original cost of building, \$18,578.89. This building is used for the deposit of house-offal daily collected in the city carts, and from which it is thence conveyed without the limits of the city proper by purchasers.

#### West Stable and Sheds.

The stable is a brick building, a story and a half high, 128 feet by 50, located on North Grove street, built in 1860, with suitable outbuildings attached to the same. It has accommodations for 83 horses, in stables and sheds. The lot contains about 45,152square feet.

#### Highland Stable.

With accommodations for 60 horses, on the old Almshouse lot. Highland street, containing 81,082 square feet. A part of this stable and adjoining lot is used by the Paving Division. There is on this lot a brick stable, which cost \$88,594.13. On this lot is an offal-shed, erected in 1875, at a cost of \$1,160.12

#### Charlestown Stable.

With accommodation for 25 horses, is situated on Rutherford avenue; lot contains 17,300 square feet of land; stable built in 1875, cost \$5,083.07; sheds and outbuildings built in 1879.

#### Fort Hill Wharf.

Containing 21,054 square feet, placed in charge of the Sanitary Division, used as a dumping station for the city's garbage and refuse, and as a landing-place for scows, which convey this stuff to sea. There are two dumping-boats, known as the Barney dumpingscows, and these are in continual use for the above purpose, and are towed to sea by the Street Department steam tug-boat "Cormorant." The tug-boat is also used by the Sewer Division. A portion of this wharf is used by the Street-Cleaning Division as a locker for push patrol-carts, etc.; a part is in charge of the Paving Division; and a portion occupied by a tenant.

#### Gibson Street Plant.

Containing 42,000 square feet, and situated in Dorchester district, which has been used and occupied by the New England Construction Company, for the treatment and disposition of offal, and which is now closed.

## APPENDIX E.

### REPORT OF THE DEPUTY SUPERINTENDENT OF THE SEWER DIVISION.

#### PROBATE BUILDING, 28 COURT SQUARE, BOSTON, February 1, 1896.

#### Mr. B. T. WHEELER, Superintendent of Streets:

DEAR SIR: I respectfully submit the following report of the expenses, income, and business of the Sewer Division, for the financial year ending January 31, 1896, together with a brief statement of the present condition of the sewers and other property, the work done this year, and what should be done in the near future that the efficiency of the sewers may be improved.

Respectfully yours,

H. W. SANBORN,

Deputy Superintendent.

The Sewer Division has charge of the following work :

1. The maintenance and construction of all common sewers and eatch-basins.

2. The maintenance of the main drainage works.

3. The maintenance of Stony brook.

4. The maintenance and construction of all street culverts.

5. The preparation of plans, and the engineering and supervision required on the construction and maintenance of all work connected with the division.

6. The granting of permits for all connections to be made with the common sewers, and the custody of bonds filed by drain-layers authorized to make such connections.

7. The levying of assessments on estates benefited by the construction of sewers.

One hundred and thirty-nine thousand two hundred (139,200) lin. ft. of sewers have been built during the past year by the city, and thirty-six thousand two hundred and eighty-seven (36,-287) lin. ft. have been built by private parties according to the plans, and under the inspection of this division, and accepted by the city under the usual forms of release.

Before submitting any of the details necessary to a comprehensive statement of what has been accomplished by the Sewer Division during the past year, your attention is called to the urgent necessity of an increase in the maintenance appropriation over what we have had for the past two or three years. It is impossible to do justice to the citizens or the department without it. The amount received has been carefully expended, but it is impossible to keep the sewers and catch-basins in anything like a sanitary condition without an increase. To emphasize the fact, I have only to state that fifty-five (55) miles of sewers and five hundred and seventy (570) catch-basins have been added to the system in the last two years alone, and yet instead of an increased appropriation to care for the same, the division had appropriated for maintenance the past year \$50,000 less than in 1893.

Another item that should be recognized in providing for the maintenance of the division is that of repairs to the plant at the pumping-station. Money must be provided to do the necessary work, or the vital point in the whole sewer system will some day become suddenly inoperative.

The experience of the last few years has proven that money for this work cannot be obtained outside of the maintenance appropriation.

It would seem that the healthfulness of the city, which is to a great extent dependent upon the proper sanitary condition of the sewer system, would be reason enough to furnish a sufficient amount to properly maintain the system, even if some less urgent matters were curtailed in consequence.

The city is growing fast, new territory is being developed, the sewer system expanding proportionally, and it is impossible to maintain it properly without a somewhat nearly corresponding increase in appropriation.

#### CITY PROPER AND BACK BAY.

The system of sewers in the vicinity of Haymarket square, bounded roughly by Causeway, Hanover, Endicott, and Merrimac streets, and having its outlet through Canal street, remains in the same condition in which it was left by the building of the westside intercepter in 1883.

It was assumed by the authorities of the Improved Sewerage at that time that the city would proceed at once to rebuild this system, but it has been put off from year to year until now thirteen years have elapsed, and the sewers are filled nearly to the top with sewage deposit.

A more unsanitary condition of things can hardly be found in any large city in this country than exists in this district. This whole matter, and the possible remedies therefor, were fully discussed in the annual report for 1891, to which reference is made. Briefly, there are two courses which may be pursued, one, to rebuild all the sewers at an elevation several feet higher to correspond with that of the west-side intercepter; the other, to build a new sewer across the city from the east-side intercepter low enough to drain out these sewers; a plan which is feasible from the fact that the east-side intercepter is about four feet lower than that of the westside. The latter plan is favored on account of its being somewhat cheaper, and affording a system of sewers at a lower grade, a desirable object for this business section of the city, where cellars will probably be deeper in the future than they are now.

The completion of the Beach-street system should be undertaken, or at all events, that portion which includes the rebuilding of the contracted section of the Harvard-street outlet sewer; the flooding of cellars connected with this system demonstrates its necessity.

The sewer in Falmouth and Norway streets, which is badly settled and broken, should be rebuilt without further delay, as its collapse would dam up the sewage of a considerable section. The main sewers in Berkeley, Dartmouth, Fairfield, and Hereford streets are contracted at their storm outlets into Charles river; these outlets should be enlarged and tide-gates of sufficient capacity provided.

The perfection of the surface drainage system of the Back Bay, for which a study was made last year, should be attended to; about one hundred and thirty-three catch-basins and seven thousand linear feet of pipe sewers and surface drains are needed.

Twelve catch-basins in Charlesgate East are connected with a sewer, while the covered channel of Stony brook lies in the same street.

These basins should never have been connected with a sewer when a large surface drain was almost equally convenient. Their connections should be removed from the sewer and put into the brook; an inexpensive change by which a considerable amount of surface-water could be kept out of the Hereford-street sewer system.

The houses on the water-side of Beacon street still drain into Charles river. A sewer should be built for these houses whenever the proposed boulevard along the bank of the river is built.

A very large number of sewers in the city proper, especially in the South Cove, are settled and defective. The following list will give an idea of the extent to which the city will be called upon to rebuild sewers in the near future; the rebuilding of a large proportion of these cannot be much longer postponed, and should not be any longer delayed, if funds can possibly be secured, as the cleaning of them is continuous and expensive:

Brighton street, from Milton to Leverett street. Wall street, from Minot to Causeway street. Wiget street, from N. Margin to Salem street. Webster avenue, from Hanover to Unity street. Hull street, from Commercial to N. Hudson street. S. Market street, from Commercial street to Merchants row. Haverhill street, from Traverse to Causeway street. Nashua street, from Minot to Causeway street. India street, from Central street to India square. Milton street, from Brighton to Spring street. Leverett street, from Causeway to Green street. Chatham street, from Commercial street to Merchants row. Bread street, from India to Broad street. Part of sewer at Prince and Thaeher street. Stillman street, from Charlestown to Salem street. Way street, from Harrison avenue to Albany street. East street, from Federal to Lincoln street. Edinboro' street, from Essex to Beach street. South street, from Beach to Kneeland street. Winchester street, from Church street to Edgerly place. Appleton street, from Tremont to Berkeley street. Albany street, from Genesee to Troy street. Oak street, from Albany to Hudson street. Warren avenue, from Dartmouth to Clarendon street. Passageway between Concord street and Worcester square.

St. Charles, Guy, Piedmont, Ferdinand, Fayette, and Kirkland streets are badly settled and need either partial or complete rebuilding.

#### Work done during 1895.

The defective drainage of the Quincy Markets, frequently mentioned in previous annual reports, is in a fair way to be remedied, the special sewer for that purpose being now under way, including a large tank for the storage of sewage during those periods of rain and high tide when the common sewers do not afford drainage to low cellars.

The cellars of business blocks in this vicinity are in much the same condition as those of the markets, and it would be a desirable thing, if funds were available, to build similar systems for their accommodation.

Five thousand seven hundred and thirty-seven (5,737) linear feet of sewers and surface drains were built by the city by day labor and contract, and two thousand one hundred and sixty-two (2,162) linear feet by private parties and released to the city.

#### CHARLESTOWN.

A sewer will have to be built in Chelsea street, between Medford street and Scott's court, to conduct the sewage of the court into the Metropolitan sewer, which ends at Medford street.

Twelve connections, costing about \$30,000 in the aggregate, will have to be made with the Metropolitan sewers the coming season, as was stated during the year in a communication to the Mayor, transmitted by him to the City Council.

New sewers are needed in Arlington avenue, Russell street, between Mead and Eden streets, and in Concord street.

The Beach-street outlet should be rebuilt of increased size, the backing up of sewage in the Cambridge-street sewer being largely due to the outlet.

Old and defective sewers in the following streets should be rebuilt:

Lyndeboro' street, Essex to Middlesex street.

Beacham street.

Monument avenue, Warren street to Monument square.

Rutherford avenue, Chapman to Dunstable street.

Corey street. Winthrop street, Warren to Adams street. Frothingham avenue.

#### Work done during 1895.

One thousand three hundred and eleven (1,311) linear feet of sewers and surface-drains were built by the city by day labor.

#### EAST BOSTON.

The outlet-sewer for Leyden street, west of Breed street, is now under way. It will serve for the outlet for sewers on the southwestern part of the hill.

The Havre-street sewer, between Meridian and Sumner streets, should be rebuilt; and a main sewer should be started in Chelsea street, near the bridge.

The following sewer-outlets need rebuilding :

Porter street. Putnam street. Jeffries street. Decatur street. Brooks street. Outlet at Dock No. 13.

Eighteen connections with the Metropolitan sewer system, estimated to cost \$45,000, should be made during the coming year.

#### Work done during 1895.

The Orleans-street sewer, between Maverick and Porter streets, has been completed, and a connection made with the Metropolitan sewer.

Three thousand four hundred and fifty-four (3,454) linear feet of sewers have been built by the city by day labor.

#### BRIGHTON.

Complaints are constantly coming in to the department from residents on Union, 'Shepard, Winship, and Washington streets, on account of their cellars being flooded during every considerable rain-storm. The trouble has been exhaustively discussed in numerous past reports; briefly, it is due to the fact that the sewers are too small to carry the surface-water during storms, and the brook, which formed the natural drain for this district, has been almost completely obliterated by the abutters, who now suffer the natural consequences of their folly.

The city, too, is not blameless, its agents in past times having yielded to the importunities of these same abutters, and connected the brook at various places with the sewers. This department has but two alternatives to consider in devising a remedy: either to restore the brook channel upon the old route, or by arrangement with the abutters, upon lines near those of the old route, or to build an expensive surface drain located in the streets. The Board of Health has the power, which this department does not possess, to enter upon private lands and restore the old channel and assess the cost of the work upon those benefited, and should take this action in the interest of public sanitation.

The house sewer and surface drain, contemplated for several years, for North Harvard street, should be built. Sewers should also be built in the following streets :

#### Newton street.

School street, from Market to Portsmouth street.

Allston square, from Commonwealth avenue to Allston street.

A sewer should be built from Buffalo to Everett street, there to connect with the Everett-street sewer, to take the sewage from the stock yards, leaving the old culvert, through which the sewage of the stock yards now drains, to carry the surface-water from the road-bed of the B. & A. R.R. and the water from the old brook.

An outlet should be provided for the surface-water of Lincoln street, near where the track of the Sewall & Day Cordage Company crosses it.

Our topographical plans show that a small branch of the brook mentioned in the preceding paragraph formerly flowed along and across the tracks of the B. & A. R.R. at this point; this should be restored and the Lincoln street catch-basins drained into it.

#### Work done during 1895.

The sewer system of Harvard-avenue has been built, and also those of Sections 1, 2, 4, 6, and 8 of Commonwealth-avenue boulevard.

Section 3 is being built, as are the outlet sewers in Chestnut Hill avenue. A long and expensive outlet remains to be built in new streets, between Foster and Lake streets. The Lake-street sewer, completed in 1895, is the outlet for a portion of Commonwealth avenue and for a part of the Newton boulevard. A new main sewer, connecting with the Metropolitan sewer at Faneuil Station, has been built, and will afford an outlet for sewers in the streets on the northerly side of Bigelow hill.

Twenty-eight thousand three hundred and eighty-four (28,384) linear feet of sewers and surface drains have been built by the city by day labor and contract, including the sewers of the boule-vards, and four thousand six hundred and sixteen (4,616) linear feet by private parties.

#### SOUTH BOSTON.

The sewer outlets along the sonthern shore of the peninsula at H, I, K, N, P, and Q streets are all in very bad condition and should be rebuilt. As the Park Department is engaged in building the Strandway along this shore, the rebuilding and extending these outlets must be done in connection with the work of the Park Department. The latter department should pay the cost of extensions beyond the present shore line, necessitated by the Strandway.

The B and Seventh street outlet, from the junction of these streets to South Bay, should be rebuilt, both on account of its insufficient size and defective condition. If funds can be made available the whole scheme, discussed in several previous reports, of sewering Dorchester avenue between B and D streets, and rebuilding D-street sewer, between Dorchester avenue and Eighth streets, should be carried out in connection with work on the outlet. The sewer in Seventh street, also, between B and D streets, should be rebuilt, as it is in bad condition.

The outlet at Dorchester avenue and Dorr street will have to be extended, as parties owning the flats are filling in, and have nearly shut off the outlet. The Kemp-street outlet, which has been broken down for years, should be rebuilt and made of sufficient size to serve for an overflow for the South Boston intercepter.

The sewers in Dorchester avenue, between D and Dexter streets, and in E street, between Seventh and Eighth streets, are broken and settled and liable to fall in at any time; they should be rebuilt at once.

The sewer in Silver street, between C and D streets, is broken in in so many places that the flow of sewage is obstructed and backs into the cellars; only temporary relief can be given by frequent cleaning.

It should be rebuilt immediately, as the cost of cleaning it, in its present condition, will soon exceed the cost of rebuilding.

The sewers in Dexter and Ellery streets are so badly broken and settled that the cleaning-rods cannot be pushed through them, houses are flooded, and complaints are numerous. They should receive early attention, and be rebuilt upon a substantial foundation.

The sewer in Mercer street should be rebuilt of larger size, to prevent further flooding on Mercer and Vale streets.

Many new catch-basins are asked for by the Paving Department, and many new manholes are needed on old sewers, as the distance between existing manholes is too great to admit of proper cleaning. A fund should be provided for building these in this district, and also for repairing defective catch-basins and manholes.

A sewer in Dorchester avenue, between B and D streets, is desirable, but not imperative, at the present time, and the D-street sewer, between Dorchester avenue and Eighth street, should be built, as it is settled so much as to form a poor outlet for the lateral sewers connected with it.

#### Work done during 1895.

The Dorchester-avenue sewer, between Fort Point channel and Broadway, has been rebuilt in a substantial manner.

Two thousand and ninety-seven (2,097) linear feet of sewers were built by the city by day labor.

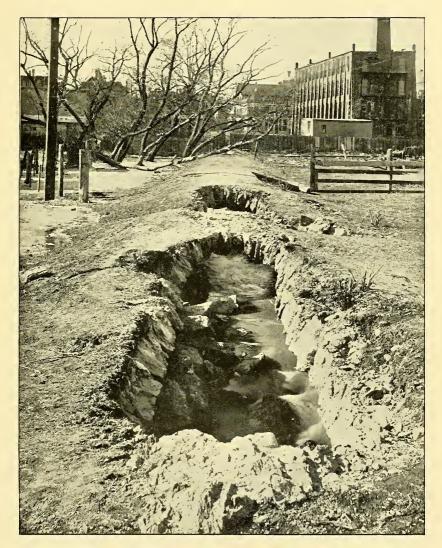

#### DORCHESTER.

The sewer outlet and overflow for the Dorchester intercepting sewer, at the corner of Freeport and Shamrock streets, has been obstructed by filling in of the flats during the past year; a large wooden outlet sewer should be built at this point as soon as practicable and carried out upon the flats as far as the wharves now extend. Any serious obstruction of this outlet will result in flooding of cellars all along the line of the intercepter.

The Dorchester intercepter should be provided with a capacious overflow outlet at or near Crescent avenue. This sewer is controlled by a single regulator, situated at its junction with the main at Mount Vernon street: when the regulator shuts during storms there is no relief for the sewer nearer than Glover's Corner, about one mile away. All the sewers which connect with it between these points are consequently backed up at such times, and remain so until the regulator opens again the connection with the main intercepter. The building of this overflow sewer, which should properly have been built in connection with the building of the regulator, has now become a necessity, and should not be longer delayed. Another locality which stands in pressing need of relief, and the condition of which has been discussed in numerous previous annual reports, is the Gibson and Park streets district. So greatly are the sewers overcharged with water during storms that the manhole covers are thrown off, and the water spouts so high from them as to scour out the hard frozen macadam surface of the streets and make it necessary to fence off these places until the streets can be repaired; the sewers in these streets, together with Tenean brook, drain a very large territory, and their capacity, combined with that of the brook, is entirely inadequate to carry off the water of a storm. Tenean brook, between Park street, near Clayton street, and the Shawmut Branch of the Old Colony Railroad at Geneva avenue, inclusive, should be largely deepened and widened, and would then be an effective aid to the sewers. The temporary plan for sewering Lauriat avenue and vicinity has been adopted, the gravity main from Talbot avenue to Lyons street begun, and land purchased for a pumping-station, on the corner of Chapman avenue and Lyons street. The main sewer, extending southerly and easterly from Lauriat avenue, to receive the sewers of the Nelson and Corbet streets district, should be built this year, and also as many of the laterals in the streets of this district as possible.

This will provide for the house sewage of the district, but not for the storm-water, for, inasmuch as all the sewage must be pumped once at Lyons street and again at the pumping-station of the main intercepter at the Calf Pasture, no surface-water can be admitted into these sewers.

This region is now overflowed and the streets rendered impassable at nearly every storm, owing to the inadequate size and obstructed condition of the Canterbury branch of Stony brook. An extensive improvement of this branch of Stony brook will have to be undertaken by the city, and either the cost assessed upon the lands benefitted, as elsewhere discussed, or borne by the city in general, in the interest of the public health. This work cannot be much longer postponed as the region is being rapidly settled, on account of the proximity of the stations on the New York & New England Rail-

DORCHESTER-BROOK SEWER, - SHOWING NECESSITY OF BEING REBUILT.

.

road. The improvement must be started at least as far down stream as the culvert on Walk Hill street, and extended to connect with the drainage ditch dug by the Park Department around Franklin field. Another region where a similiar improvement must be undertaken in the near future is that drained by the Mattapan brook; a main sewer will also have to be built in this valley, to connect with the Neponset Valley interceptor, when the latter sewer reaches this locality. The building of the Neponset Valley interceptor is being undertaken by the Metropolitan Sewerage Commission, and none too soon, as no sewers can be built in those portions of Dorchester and West Roxbury which slope towards the Neponset and Charles rivers, until the intercepting sewer is ready to carry away the sewage; the presence of sewage could not be tolerated in the mill ponds of the Neponset river.

The sewer system of Geneva avenue, Greenbriar street, Josephine street, all laid out under Chapter 323 of the Acts of 1891 as amended by Chapter 418 of the Acts of 1892, have been completed, as have also those of Sections 5, 6, 8, 10, 11, and 12 of the Blue Hill-avenue boulevard; Sections 1 and a part of 2 and 3 are under contract and in progress, and the same is the case with Lauriat avenue.

Four thousand one hundred and thirty-nine (4,139) linear feet of sewers and surface drains have been built by the city by day labor and contract, including the boulevard systems, and eighteen thousand six hundred and fifty-two (18,652) linear feet by private parties.

#### ROXBURY.

Dorchester-brook sewer, between Norfolk avenue and Clifton street, a stone arched channel with very slight covering, has collapsed, the arch having probably been lifted by internal pressure from the volume of water which it had to carry in storms, as it was much too small. It is about to be rebuilt of brick of much larger size, and at a greater depth. The new channel will be a continuation of the channel built during the last few years from the South Bay up to the point in Norfolk avenue where the old sewer formerly crossed it. The location will be changed and will lie in the centre of a new street recently laid out by the Board of Street Commissioners, nearly parallel with Pontine street.

Numerous complaints of flooding have been made along the line of this sewer up as far as Quincy street; it is undoutedly too small for the constantly increasing volume of water which it has to carry, and will have to be rebuilt before long up to this point.

Complaints of flooding are received at every storm from the residents of Orchard park and Yeoman street. Some good can be done by building a surface drain in Orchard park, but the sewers in Yeoman, Chadwick, and Hampden streets are all too small and will have to be rebuilt or their capacity supplemented by new sewers. Meanwhile the residents should protect themselves from flooding by putting back-water traps upon their connections with the sewers.

Guild row is another locality which frequently suffers from floods

327

due to the insufficient size of the sewers. The plan for extending the large Vernon-street sewer to this locality should be carried out.

The projected system of sewers in Columbus-avenue extension will afford an outlet for a sewer to relieve Notre Dame street, which now suffers from the inadequacy of the sewer in this street and Bragdon street.

A system of pipe-sewers is necessary to take the drainage from the houses on both sides of the old channel of Stony brook between Huntington avenue and the Roxbury Crossing. (See the Annual Report for 1892.)

Until these sewers are built, about 3,000 feet in all, Stony brook will continue to be somewhat polluted with sewage.

The Harrison-avenue sewer, between Northampton and Eustis streets, is settled so much that it cannot be cleaned without pumping it out with a steam-pump. Although the rebuilding of this sewer will be very expensive, it should not be put off any longer.

The following is a list of defective sewers requiring rebuilding :

Davenport street, from Columbus avenue to Tremont street.

Walpole street, from Columbus avenue to Tremont street.

Burke street, from Columbus avenue to Tremont street.

George street, from Clarence street to Dorchester brook.

George street, from Gerard to Magazine street.

Haskins street, from Vernon to Ruggles street.

Chesterfield street.

Orchard street, off Yeoman street.

Winslow street, from Palmer to Eustis street.

Chadwick street, from Ambrose to Yeoman street.

Marshfield street, from Batchelder street to Norfolk avenue.

Hunneman street, from Brown street to Harrison avenue.

Harrison avenue, from Eustis to Northampton street.

Newcomb street, from Reed street to Harrison avenue.

Lenox street, from Sanford place to Harrison avenue.

Haviland street, from Parker street to Massachusetts avenue.

#### Work done during 1895.

Main sewers have been built in Massachusetts avenue, Gerard street, and Boylston-street extension; the latter a difficult and expensive sewer to build, the street consisting of a new gravel fill upon deep beds of mud and peat. The sewer system of the Huntington-avenue boulevard is practically completed, with the exception of a few unimportant items, and also with the exception of the work of strengthening the arches of the old stone channel of Stony brook. The sewer system of Columbus-avenue boulevard is also practically completed from Northampton to Ruggles street, and is under contract up to the Roxbury Crossing.

The sewer system of the last section of the avenue, from a point between Dimock and Brighton streets to Franklin park, is also completed.

A section of the channel for Stony brook, recommended by the Commission of 1886, has been built by the N.Y., N.H., & H. R.R., in connection with the raising of the tracks of its Providence Division from the bend of the brook at the railroad near Amory street to a point 400 feet south of Boylston street, in West Roxbury.

This channel is submerged nearly to the top of the arch, and will remain so until the new channel is built at the low grade, from the inlet chamber up to join it. A section of the West Roxbury low-level sewer, discussed in previous annual reports, was built in connection with, and supported on the haunch of, the Stony-brook channel, and paid for by the city, for the reason that it could be built cheaper at this time and in this manner than at any subsequent time.

Forty thousand seven hundred and sixty-two (40,762) linear feet of sewers and surface drains were built by the city, by day labor and contract, including the sewer systems of the boulevards mentioned, and four thousand one hundred and forty (4,140)linear feet by private parties, including sewers and surface drains built by the N. Y., N. H., & H. R.R. in connection with raising the tracks of the Providence Railroad.

#### WEST ROXBURY.

There is a large region in the southern and western quarters of Roslindale, part newly settled and part old, which is without sewers, although fairly populous. This region embraces, among the older streets, Hemlock, Bellevue avenue, etc., south-west of Roslindale village; also a number of new streets, which have been graded off of Bellevue and Belgrade avenues, such as Orange, Berry, Newburg, Aldrich, and Colburg streets. All of these could be drained directly, or with short outlets, into the West Roxbury trunk sewer. Another group, embracing South Fairview, South Walter, and Brookfield streets, etc., would need an outlet across the Dedham Branch Railroad, just west of Roslindale Station, into the Brandon and Corinth streets sewer. This outlet would eventually be continued across South street to accommodate Farquhar and Selwyn streets, and indeed all of that valley south-west of Hewlett street, the sewer in which has already been built to go into the existing sewer in Walter street.

Streets which have been laid out across the lowlands adjoining Stony brook, in Jamaica Plain, such as New Keyes and Williams streets, have needed sewerage for a long time, but could not be accommodated because the existing system of sewers is too high to be extended into them. If the West Roxbury low-level sewer should be completed as far as Boylston Station during this coming year, in connection with the building of the Columbus avenue boulevard, as now seems probable, it will then be within a reasonable distance of these streets, and it will then be possible to extend it to them and sewer them at moderate cost.

Those valleys which lie between the Stony brook divide and Charles river can be sewered as soon as the Neponset valley and Mother brook intercepting sewer is completed. As the work of building this sewer has been taken up by the Metropolitan Sewerage Commission, there seems to be a probability of being able to sewer these districts properly in the near future. The streets in the vicinity of Florence, Sycamore, Ashland street, etc., have been in need of sewerage for a long time; a branch of the Roslindale main sewer will have to be extended to this neighborhood from the northerly of the two intersections of Washington and South streets.

#### Work done during 1895.

Work is in progress upon a sewer, upon the separate principle, to extend from the Roslindale main sewer at Franklin place to the Insane Asylum on Walk Hill street. This sewer will afford housesewerage only for streets along its route, but cannot receive the flow from eatch-basins.

Seventeen thousand three hundred and fifty-eight (17,358) linear feet of sewers and surface-drains have been built by the city by day labor and contract, and six thousand seven hundred and seventeen (6,717) linear feet by private parties, including sewers and surface-drains built by the N. Y., N. H., & H. R.R., in connection with raising the tracks of the Providence Division.

#### MAIN DRAINAGE WORKS.

The amount of sewage handled at the Pumping-station is increasing so rapidly from year to year that it is imperative that some action should be taken towards increasing the high-duty pumping capacity or keeping surface-water to a greater extent out of the sewers. It was necessary the past year to run the low-duty pumps one-quarter of the time, which increased the coal consumption to a much greater extent than would have been the case if high-duty pumps only could have been used.

So large an amount of surface-water now gets to the Pumpingstation that, without the pumping capacity to handle it, it causes the regulators to be closed longer than they should be, discharging more through the overflows than is advisable, and keeping the common sewers backed up more than is desirable.

Another thing that is working to the detriment of the system is the continued postponement of building overflows for some of the intercepting sewers, that have been recommended for a long time, and are now an urgent necessity; also the failure to extend numerous overflows of the common sewers that are becoming obstructed to an unsafe extent by the filling-in of the flats at their outlets.

These overflows are spoken of in detail elsewhere in the report under the districts in which they are. Mention was made in the last annual report of the inadequate accommodations of the force in charge of the main and intercepting sewers. Nothing has been done towards putting their quarters on Massachusetts avenue in shape. It should not be deferred longer.

The construction of the many connections with the Metropolitan system in East Boston and Charlestown will add greatly to the work of this force, which will have to be increased, and proper buildings should be constructed for their use without delay.

At the Pumping-station the conditions are about the same as at

the beginning of the year. The amount of sewage pumped has increased materially, but the much-needed renewals and additions, spoken of so repeatedly in past reports, have been held in abeyance by the lack of funds. The force has been kept very busy on the regular work and the incidental repairs absolutely necessary to keep the pumps in operation.

Pump No. 4 was shut down while the boxes of the main and beam shafts were rebabbited, necessitating jacking-up the engine, at a cost exceeding \$2,000. A few of the items most needing attention are :

New sleeves for plunger-rods, general repairs on air-pumps, and the substitution of rock-shafts for the present valve motion, all on pumps Nos. 1 and 2; extensive repairs on the pump-well gates, a duplicate main steam-pipe from the boiler-house, and two (2) new cages at the filth-hoist.

There has been more sludge removed from the deposit-sewer during the past year than ever before. Unusual quantities of soft sludge were deposited in the lower sections of the sewer during the hot months.

The following is some of the work accomplished by the outside force in addition to the regular work: The two scows were put on the blocks and thoroughly calked; the sea-wall at the west shaft was repointed over the whole face; the high board fence around the grounds was painted; and a new machine for moving the sludge in the north deposit-sewer is being constructed to replace the old one that gave out.

The two sewer-boats, kept in the deposit-sewers, became useless and were replaced by new ones. The sludge-tank is getting beyond many more repairs, and it is only a question of a short time before it will have to be replaced by a new one. The theoring of the wharf will have to be renewed this year, as it is hardly safe.

When this is done, it would be well to make the extension that has been recommended in previous reports. Tests of the tunnel, to determine its condition as regards deposits, give a better result than has been shown for several years. Waves in the tunnel have been noticed more frequently than usual; and I would suggest the placing of automatic gauges, at favorable points, to obtain data, from which the cause might be determined.

At Moon Island, considerable work has been done outside of the regular routine work. The walls in two divisions of the reservoir were repointed, as also was considerable brick masonry on the buildings and ventilators of the discharge-sewers. A large amount of gravel was hauled to different points on this property, to repair damage done to banks and roads by the storms, and for the necessary filling in the cove.

An old building was remodelled for the use of the night-men when off duty, to take the place of the inadequate quarters in the gate-house.

Two old buildings at Squantum, that were unsafe, were razed.

I give the following statement of what is needed at Moon Island and Squantum. It is imperative that some of this should

331

be done this year, but all of it is necessary : the building of a boat chamber on the outfall sewer; the laying of a 6-inch cast-iron . water-pipe along the outfall sewer from the reservoir to the connection chamber, with a hydrant at each manhole, for use in washing off the tie-rods and the upper sewer, to prevent odors; the complete renewal of upper staging in 6-foot gallery in each division of the reservoir, and also of all tie-rods and cross-pieces; the building of a new barn and shed or storehouse at Moon Island; the building of a new shed or storeroom (temporary) at east shaft; the laying of a new floor at the lower gate-house; the removal of iron gates in the outfall sewer, for repairing, and also for renewal of all anchor-bolts, which latter work cannot be done until the boat chamber mentioned is built; pointing and repairing of walls in two divisions of the reservoir, and on the buildings; setting of gauges at east shaft and at connection chamber; building a stone wall and repairing roadway at Squantum; painting both iron and wooden fences at reservoir, and improved arrangements for handling grease at east shaft.

Sewer assessments have been made by this division for the year ending January 31, 1896, in accordance with Chapter 402 of the Acts of 1892, and amendments thereto, to the amount of \$202,110.06, and the bills have been deposited for collection with the City Collector.

Bills for sewer assessments, amounting to \$3,557.98, have also been deposited for collection, representing those estates assessed under Chapter 456 of the Acts of 1889, and amendments thereto, which have made connection with the public sewers during the year; making the total amount of assessments deposited for collection \$205,668.04.

There remain on the books of this division, at 5 per cent. interest, \$32,864.35, representing the assessments under the Acts of 1889, and amendments thereto, for these estates which have not been connected with the sewers for which they were assessed, and bills for which will be deposited for collection as the connections are made. This sum represents 24.8 per cent. of the total assessments made under those Acts.

Entrance fees to the amount of \$4,474.07 have been collected from estates upon which no sewer assessment was ever paid, in accordance with Chapter 36, Section 10, of Revised Ordinances. Permits have been issued to licensed drain layers to make 3,071 connections with the public sewers, and the work done under these permits has been inspected and a record of same made on the plans of this division.

The following tables and statements will show the amount of 'money expended and work done by this division during the year:

	Financ	Financial Statement.			
Appropriations.	Balance on hand Feb. 1, 1895.	Appropriations added during the year.	Total Credits.	Expenditures during the year.	Balances on hand Jan. 31, 1896.

Summary of Sewer Construction for the Twelve Months ending January 31, 1896.

245 catch-basins, built by contract.

76 drop inlets, built by contract.

222 catch-basins, built by day labor.

561 catch-basins, repaired by day labor.

27 drop inlets, built by day labor.

16 manholes built.

317 manholes repaired.

862,964 linear feet sewers flushed.

700 cubic yards material removed from sewers.

6,509 catch-basins cleaned.

18,264.25 cubic yards removed from catch-basins.

1,937.75 feet culverts built.

45 feet culverts repaired.

There are now 416.45 miles of sewers in charge of the Sewer Division.

The amount expended by this division during the twelve months ending January 31, 1896, including the amount spent under special appropriations, was \$885,225.70.

# APPENDIX G.

### REPORT OF DEPUTY SUPERINTENDENT OF STREET-WATERING DIVISION.

ROOM 1, PROBATE BUILDING, BOSTON, February 1, 1896.

MR. B. T. WHEELER, Superintendent of Streets:

DEAR SIR: I respectfully submit my annual report of the expenditures, income and operations of the Street-Watering Division of the Street Department for the financial year ending January 31, 1896.

Respectfully yours,

M. Edwin Libby,

Deputy Superintendent.

# CITY DOCUMENT No. 29.

STREET DEPARTMENT --- STREET-WATERING DIVISION. 413

#### INCOME.

During the year the Division watered in front of 127 schoolhouses, 9 police-stations, and 39 engine-houses. The Board of Police and the Fire Department agreed to pay for the service, as they have formerly done, but the School Board refuses, on the ground that they have no appropriation for the purpose, although they did pay for such service in 1891 and 1892. It is customary for departments rendering service for other branches of the City Government to charge for the work done, as appropriations are made for specific public work, and each department has money or should have it for service which they are willing to accept or request. Why the School Board should refuse to pay our fair charge is not altogether apparent.

The following sums were charged for street-watering, and bills for the same deposited with the City Collector during the financial year ending January 31, 1896 :

Fire Depar	tmen	t.						\$490 (	00
Board of H	olice							136 8	35
Homeœpat	hic H	lospita	ıl					105 (	00
Louisburg	squai	re				•		100 (	00
Fairfax an	d Bea	aumou	t str	eets				75 (	00

#### Summary of Day Work paid for by the City.

The above summary shows that 112 carts watered 301.92 miles of macadam streets this year. Last year  $108\frac{1}{2}$  carts, hired by the city,  $13\frac{1}{2}$  working under contract, watered 292.16 miles. The cost of the day work this year, exclusive of supervision, was \$214 per mile, or 664,532.75, against \$229 per mile for the day work done last year, and 8575 per mile for the contract freshwatering service in the Back Bay, and \$460 per mile in the South End, and a total expense of \$74,296.67. Fresh water was used entirely this year.

Comparison of Day Work with Contract Work in Back Bay and South End.

Year.	Districts.	Method of Watering.	Expense.	Saving in Day Work.
1904	Poole Por	Contract	\$6,696 02	
	Back Bay Back Bay		4,990 00	\$1,706 02
	South End South End		5,128 50 2,540 00	2,588 50
Total s	aving in Day wo	ork over Contrac	t work	\$4,294 52

The above comparison is one of the most satisfactory evidences of the good results accomplished by the division this year. To it attention is specially directed.

The cost for watering in the Back Bay, with fresh water, in 1894 under contract was \$575 per mile, while this year the same service was more efficiently rendered at an expense of \$424 per mile.

The expense in the South End last year for watering was \$460 per mile for fresh water, \$630 per mile for salt water, while this year the watering was done under day work at an expense of \$277 per mile.

Work done by Contractors at the Expense	of the	Abutters.

### STREET DEPARTMENT - STREET-WATERING DIVISION. 415

This represents the watering done upon paved streets for and at the expense of the abutters; it is not compulsory, resting entirely with the abutter whether or not he shall have it done. The division's concern in the premises is simply to check exorbitant charges, which it is but fair to state never occur, and to otherwise protect the rights of citizens and the city.

The table shows that 21 carts watered 36.21 miles of paved streets, which is an increase of  $1\frac{1}{2}$  carts and 3.28 miles over last year.

Name.	Carts.	Miles.
Proctor Bros. & Co Potter Bros. Daniel Clark H. P. Cook & Co. E. J. Janse. O. Nute & Son	1	$1.75 \\ 1.12 \\ 0.86 \\ 1.09 \\ 0.54 \\ 0.21$
Totals	38	5.57

Work doue	by :	the	Contractors	Free	of	Cost	to	the	City.
-----------	------	-----	-------------	------	----	------	----	-----	-------

This summary shows the amount of watering rendered free of cost to the city by the contractors for the franchise of watering for the abutters. They agree to give this gratuitous service in return for the exclusive privilege of soliciting parsonage within defined street-watering districts with the right of using the city's standpipes and water. The work shown in the above table would cost the division about \$2,000 to perform.

Distribution of Carts showing Entire Amount of Work done.

#### Water-Posts or Stand-Pipes.

During the year seven new stand-pipes were erected, and twelve relocated for the improvement and efficiency of the service.

Districts.	1891.	1892.	1893.	1894.	1895	Increase
South Boston	23	25	27	27	28	1

City Proper	24	42	45	48	52	4
	271	339	362	386	393	7

The table shows their location by districts:

An increase of 122 standpipes since 1891.

The carts used for street-watering this year were almost entirely of the improved style of manufacture.

The division owns seven watering carts which were this year loaned to contractors who furnished horses and driver, and watered the streets at the rate of \$4.50 per day, the division receiving thereby 50 cents per day for the use of the cart. This arrangement was deemed more profitable than providing horses and a driver for the carts. Two of the carts have been transferred to the Paving Division for use on new macadam work.

The division is indebted to Mr. J. W. Smith, the Local Forecast Official, for the receipt of daily weather reports which assisted us very much in the working of the carts.

To the Water Board also we owe our acknowledgments for the assistance rendered us in supplying standpipes, and in turning on and off the water. STREET DEPARTMENT.
